

FUJITSU Software

Interstage Application Server

A decorative horizontal band with a red-to-dark-red gradient. It features abstract, glowing white and red lines that swirl and intersect, creating a sense of motion and energy.

Installation Guide (Server Package)

Solaris

J2S2-1621-02ENZ0(00)
November 2013

Preface

Purpose of This Document

This document describes the software required for installing Interstage Application Server, and the resources, installation method and uninstallation method of Interstage Application Server.

This manual is written for users who will install the server package of Interstage Application Server. For details on installing the client package, refer to the Installation Guide which is included with the client package.

Interstage can be operated securely using the Interstage Java EE Admin Console/Interstage Management Console. For details on a model that provides secure operation, refer to "[Appendix B Secure Operation from the Interstage Java EE Admin Console/Interstage Management Console](#)".

Who Should Read this Document?

It is assumed that readers of this document have some knowledge of the following:

- Basic knowledge of the OS used

Structure of This Document

The structure of this manual is as follows:

[Chapter 1 Installation Scenarios](#)

Provides information on Interstage Application Server installation scenarios.

[Chapter 2 System Requirements](#)

Describes the requirements for installing Interstage Application Server.

[Chapter 3 Important Notes on Installation](#)

Provides important notes on Interstage Application Server installation.

[Chapter 4 Installation Procedure](#)

Describes how to install Interstage Application Server.

[Chapter 5 Notes on Specific Features](#)

Contains notes on certain features.

[Chapter 6 Uninstallation Procedure](#)

Describes how to uninstall Interstage Application Server.

[Appendix A Installing/Uninstalling Interstage Directory Service Software Development Kit](#)

Describes how to install and uninstall Interstage Directory Service Software Development Kit.

[Appendix B Secure Operation from the Interstage Java EE Admin Console/Interstage Management Console](#)

Explains how to operate Interstage securely via the Interstage Java EE Admin Console/Interstage Management Console.

Trademarks

Trademarks of other companies are used in this documentation only to identify particular products or systems.

Product Trademarks/Registered Trademarks
--

Microsoft, Active Directory, ActiveX, Excel, Internet Explorer, MS-DOS, MSDN, Visual Basic, Visual C++, Visual Studio, Windows, Windows NT, Windows Server, Win32 are either registered trademarks or trademarks of Microsoft Corporation in the United States and/or other countries.
--

Oracle and Java are registered trademarks of Oracle and/or its affiliates.
--

Other company and product names in this documentation are trademarks or registered trademarks of their respective owners.

Export Controls

Exportation/release of this document may require necessary procedures in accordance with the regulations of the Foreign Exchange and Foreign Trade Control Law of Japan and/or US export control laws.

Chapter 1 Installation Scenarios

This section explains the types of Interstage Application Server "Server Package" that can be installed.

- Application Server

Select this to install the Application Server functions of Interstage Application Server.

This option can also be selected to install the Managed Server functions.

For details on Managed Server operations, refer to the Interstage Application Server Operator's Guide.

- Admin Server (Enterprise Edition only)

Select this option to install the Admin Server functions of Interstage Application Server and to execute operations when managing more than one server.

For details on Admin Server operations, refer to the Interstage Application Server Operator's Guide.

- Web Package

Select this to install the Web Package functions of Interstage Application Server.

Install the Web Package to set up a web server environment on the business front-end system.

Note

To run the Admin Server and Application Server functions on the same server, first install the Application Server functions. Next, use the *isaddadminfunc* command to add the Admin Server functions. For details of the *isaddadminfunc* command, refer to the Reference Manual (Command Edition).

The Application Server function types that can be installed are as follows:

- Typical installation

Select this to use the standard functions following a simple installation.

- Custom installation

Select this to install the minimum set of functions, or to use each version of JDK/JRE.

When the installation is executed, the environment required for using Interstage is set up automatically. After the installation is complete, the Interstage Java EE Admin Console/Interstage Management Console can be used for simple operation.

1.1 Functions that can be Used

1.1.1 Enterprise Edition: Application Server

If the Typical installation is selected, the functions shown as "This cannot be changed" and "Selected" in the following table are installed. If the Custom installation is selected, it is possible to select the functions that are installed.

Table 1.1 Functions Available in a Typical Enterprise Edition Installation

Function	Default status
Application Server basic functions	This cannot be changed
Java EE (*1)	Selected
Multilanguage Service Basic Function	Not Selected
Database Linkage Service	Not Selected
Event Service	Not Selected
MessageQueueDirector	Not Selected
Portable-ORB	Not Selected
Web Server (Interstage HTTP Server)	Not Selected

Function	Default status
Web Server (Interstage HTTP Server 2.2)	Not Selected
Secure Communication Service	Selected
Interstage Single Sign-on Business server(*2)	Not Selected
Interstage Single Sign-on Authentication server	Not Selected
Interstage Single Sign-on Repository server	Not Selected
Interstage Directory Service	Selected
Interstage Management Console	Not Selected
Web Server Connector (for Interstage HTTP Server)	Not Selected
Web Server Connector (for Interstage HTTP Server 2.2)	Not Selected
J2EE Compatible (*3)	Not Selected
Framework Package	Not Selected
Java SE 6	Selected
Java SE 7	Not Selected
Sample Application	Not Selected
Fujitsu XML Processor	Not Selected
Java EE 6 (*4)	Not Selected

*1 This is a GlassFish v2.1-based implementation of Java EE 5. Do not install the "Java EE" function when using it as a Managed Server.

*2 This is a server that provides access control for web-based services. When using Interstage HTTP Server 2.2 on the web server, select the Interstage HTTP Server 2.2 functions.

When using JAAS API, also select the following functions to match the execution environment.

[When using Java EE]

Java EE and Web Server Connector (for Interstage HTTP Server)

[When using Java EE 6]

Java EE 6 and Web Server Connector (for Interstage HTTP Server 2.2)

[When using J2EE]

J2EE Compatible

*3 Install the "J2EE Compatible" function when using it as a Managed Server or Combined Server.

*4 This is a GlassFish v3.1-based implementation of Java EE 6. Additionally, do not install the "Java EE 6" function on a server that is managed by this product.

Note

During installation, the system scale is set to "small" when Multilanguage Basic Function or Web server connector/J2EE Compatible function is selected. For details on system scale, refer to "Definition File Setting Values" in the "Tuning Interstage" chapter of the Tuning Guide.

Also, the setup configuration of Interstage is different according to the selected function. If you select the "J2EE Compatible" function (FJSVejb), then the setup level will be same as it would be if the *isinit type1 EJB* command was used. Otherwise, the setup level will be same as it would be if the *isinit type1* command was used.

1.1.2 Enterprise Edition: Admin Server

In Enterprise Edition, the following functions are installed if Admin Server is selected.

Table 1.2 Functions Available in an Admin Server

Function	Default status
Application Server basic functions	This cannot be changed
Web Server (Interstage HTTP Server)	This cannot be changed
Interstage Management Console	This cannot be changed
Secure Communication Service	This cannot be changed
Interstage Directory Service	This cannot be changed
JDK 6	This cannot be changed

1.1.3 Standard-J Edition: Application Server

If the Typical installation is selected, the functions shown as "This cannot be changed" and "Selected" in the following table are installed. If the Custom installation is selected, it is possible to select the functions that are installed.

Table 1.3 Functions Available in a Typical Standard-J Edition Installation

Function	Default status
Application Server basic functions	This cannot be changed
Java EE (*1)	Selected
Web Server (Interstage HTTP Server)	Not Selected
Web Server (Interstage HTTP Server 2.2)	Not Selected
Secure Communication Service	Selected
Interstage Single Sign-on Business server(*2)	Not Selected
Interstage Single Sign-on Authentication server	Not Selected
Interstage Single Sign-on Repository server	Not Selected
Interstage Directory Service	Selected
Interstage Management Console	Not Selected
Web Server Connector (for Interstage HTTP Server)	Not Selected
Web Server Connector (for Interstage HTTP Server 2.2)	Not Selected
J2EE Compatible	Not Selected
Framework Package	Not Selected
Java SE 6	Selected
Java SE 7	Not Selected
Sample Application	Not Selected
Fujitsu XML Processor	Not Selected
Java EE 6 (*3)	Not Selected

*1 This is a GlassFish v2.1-based implementation of Java EE 5. Do not install the "Java EE" function when using it as a Managed Server.

*2 This is a server that provides access control for web-based services. When using Interstage HTTP Server 2.2 on the web server, select the Interstage HTTP Server 2.2 functions.

When using JAAS API, also select the following functions to match the execution environment.

[When using Java EE]

Java EE and Web Server Connector (for Interstage HTTP Server)

[When using Java EE 6]

Java EE 6 and Web Server Connector (for Interstage HTTP Server 2.2)

[When using J2EE]

J2EE Compatible

*3 This is a GlassFish v3.1-based implementation of Java EE 6.

Note

During installation, the system scale is set to "small" when Web server connector/J2EE Compatible function is selected. For details on system scale, refer to "Definition File Setting Values" in the "Tuning Interstage" chapter of the Tuning Guide.

Also, the setup configuration of Interstage is different according to the selected function. If you select the "J2EE Compatible" function (FJSVejb), then the setup level will be same as it would be if the *isinit type1 EJB* command was used. Otherwise, the setup level will be same as it would be if the *isinit type1* command was used.

1.1.4 Web Package

The following functions can be used if Web Package is installed.

Table 1.4 Functions Available in Web Package

Function	Default status
Application Server basic functions	This cannot be changed
Web Server Connector (for Interstage HTTP Server)	This cannot be changed
Web Server Connector (for Interstage HTTP Server 2.2)	This cannot be changed
Web Server (Interstage HTTP Server)	This cannot be changed
Web Server (Interstage HTTP Server 2.2)	This cannot be changed
Interstage Management Console	This cannot be changed
Secure Communication Service	This cannot be changed
Interstage Directory Service	This cannot be changed
Web Server Monitor (Enterprise Edition only)	This cannot be changed
JDK 6	This cannot be changed

Note

- Web Package is required for using Directory linkage (using LDAP authentication) and for installing the Interstage Directory Service Software Development Kit.

For details, refer to the "Installing/Uninstalling Interstage Directory Service Software Development Kit" appendix, and then install [Interstage Directory Service Software Development Kit].

Chapter 2 System Requirements

This section explains the system requirements.

2.1 Operating System

Table 2.1 Required Operating Systems

Operating system	Remarks
Solaris 10	-
Solaris 11	(*1)

*1 To run this product on Solaris 11, the following package must be installed:

system/osnet/locale

When using the Interstage Application Server, the following patches must be applied.

2.2 Required Patches

Table 2.2 Required Patches

Operating system	Patches	Remarks
Solaris 10	138217-01	-
	119254-75	
	119317-01	
	121296-01	
	139555-08	
	118367-04	Needed to use the Directory Service.
	120900-04	Needed to use the JDK/JRE.
	121133-02	
	118918-24	
	119578-30	
	118833-36	
	142909-17	
	125891-01	
	126540-02	
	126897-02	
	140860-02	
	125547-02	
	140796-01	
	140899-01	
	127755-01	
	120272-28	
122640-05		
125503-02		
120011-14		

Operating system	Patches	Remarks
	127127-11 125555-07 138866-03 137137-09	
	142909-17	This is required to use the Database Linkage Service on Oracle Solaris Containers.
Symfoware Server	(*1)	
Symfoware Server Standard Edition	(*1)	
Symfoware Server Enterprise Edition	(*1)	
Symfoware Server Enterprise Extended Edition	910881-01, T014JS-06, T023JS-01 (*1)	

*1 For each version, apply the latest patch for the hardware being used, to guarantee system reliability.

2.3 Software Compatibility Issues

Do not install Application Server on the same system as any of the software/packages listed in the following table.

Table 2.3 Incompatible Software Products

Number	Product Name	Version
1	Interstage Security Director	3.0 or later
2	Interstage Application Server	V1.0 or later (*1)
3	Interstage Business Application Server	8.0.0 or later
4	Interstage Shunsaku Data Manager	V7
5	Interstage List Works	V6 or later
6	Interstage Service Integrator	V9 or later
7	Systemwalker CentricMGR-M/Centric Manager (Operation Management Server)	5.0 or later (*2)
8	Systemwalker Centric Manager	V13.4.0 or later (*3)
9	Systemwalker IT Change Manager	V14 or later
10	Systemwalker Service Quality Coordinator Enterprise Edition	V13.4 or later (*4)

*1 This cannot be installed more than once in the same operating system, regardless of the version level or edition

*2 This software cannot be installed with the Web Package function.

*3 Systemwalker Centric Manager cannot be installed on a machine on which the Single Sign-on server is installed.

*4 This cannot be installed on a machine on which the Systemwalker Service Quality Coordinator Enterprise Edition Dashboard/Browser Agent is installed

2.4 Required Packages

To use this product, the package shown below is required.

When this product is installed in an environment to which the package has not been deployed, it is installed using the installer for this product.

Table 2.4 Required Packages

Number	Package	Remarks
1	FJSVcir (CIRuntime Application)	This is "Uninstall (middleware)", the tool which is common to all Fujitsu middleware products. It is used to manage the information about Fujitsu middleware products that are installed, and to remove these products.
2	FJSVqstl (FJQSS)	This is the information collection tool which is common to all Fujitsu middleware products.

2.5 Disk Space

Table 2.5 Disk Space Requirements (Application Server Enterprise Edition: Typical)

Number	File system	Mount point	Disk space (Unit: Mbytes)	Remarks
1	root file system	/	0.1	
2	usr file system	/usr	1.0	
3	var file system	/var	27.0	
4	etc file system	/etc	1.0	
5	home file system	/home (*1)	0.0	
6	opt file system	/\$DIR1 (*2)	1470	
7	opt file system	/\$DIR2 (*3)	50	If an abnormal exit occurs, material for investigation and the core file are output. Secure sufficient space for this purpose.
8	opt file system	/\$DIR3 (*4)	30	

Notes

1. Estimate the database resources before creating the data store area for the database in a home file system.
2. "\$DIR1" represents the directory name specified when this software is installed. Before installing the software, check that there is at least as much space in the file system mounted in /\$DIR1 as the size shown above.
If there is not, format the disk, create the file system, and mount the file system in /\$DIR1. The name for "\$DIR1" that is recommended by the system is "opt".
3. "\$DIR2" represents the directory name specified for installing a changed package object (for example, a log or spool) when operating this software normally. Before installing the software, check that there is at least as much space in the file system mounted in /\$DIR2 as the size shown above.
If there is not, format the disk, create the file system, and mount the file system in /\$DIR2. The name for "\$DIR2" that is recommended by the system is "var/opt".
4. "\$DIR3" represents the directory name specified for installing the environment configuration file for this software (Fixed configuration install directory). Before installing the software, check that there is at least as much space in the file system mounted in /\$DIR3 as the size shown above.
If there is not, format the disk, create the file system, and mount the file system in /\$DIR3. The name for "\$DIR3" that is recommended by the system is "etc/opt".

2.6 Notes on Interstage Installation Under Solaris 10 or Solaris 11

2.6.1 Notes on Installing Interstage in Global Zones

- If the non-global zone already exists, and all of the non-global zones are not set up normally, a failure could result with an attempt to install or uninstall.

Before attempting to install or uninstall Interstage, make sure that the following does not apply to any of the non-global zones:

- The zone is defined using the *zonecfg(IM)* command, but the non-global zone is not yet installed using the *zoneadm* command.
 - After installing the non-global zone using the *zoneadm(IM)* command, the non-global zone has been booted, but the initial settings (password, hostname settings and so on) have not yet been set.
 - Installation or deletion of the non-global zone is currently in progress.
- If the non-global zone already exists, install or uninstall Interstage only when all of the non-global zones have been started (use the *zoneadm* command to check that all of the non-global zones are displaying "running").

2.6.2 Notes about Installing Interstage in Non-global Zones

- The non-global zone used to install Interstage Application Server must be made a complete root zone. When creating non-global zones, "inherit-pkg-dir" must not be set.

The root password is not created following the creation of the non-global zone. Make the zone environment settings using *zlogin* of [zlogin -C].

- Admin Server functions cannot be installed.
- Before installing the Database Linkage Service function, change the non-global zone *hostid* to a value that is different to the *hostid* of other servers that use the Database Linkage Service (Host ID Emulation). For details, refer to [5.4 Notes on Using the Database Linkage Service](#)

Chapter 3 Important Notes on Installation

This section contains notes about the following topics:

- [3.1 Notes on Installing Other Fujitsu Products](#)
- [3.2 Uninstall \(middleware\)](#)
- [3.3 How to Mount the Product Media \(DVD-ROM\)](#)

3.1 Notes on Installing Other Fujitsu Products

The FJSVsmee, FJSVslcr and FSUNssl packages may have been bundled with a non-Interstage Fujitsu product such as Systemwalker Centric Manager. Notes on installing Interstage in this case are described below.

Check if the FJSVsmee, FJSVslcr and FSUNssl packages are installed. If they are installed, check the version and level.

The versions of FJSVsmee, FJSVslcr and FSUNssl in which this version of Interstage is bundled are:

```
FJSVsmee 4.1.2
FJSVslcr 2.0.7
FSUNssl 4.2.23
```

Check the installed FJSVsmee package as follows:

```
# pkginfo -l FJSVsmee | grep VERSION
```

Check the installed FJSVslcr package as follows:

```
# pkginfo -l FJSVslcr | grep VERSION
```

Check the installed FSUNssl package as follows:

```
# pkginfo -l FSUNssl | grep VERSION
```

If the package is installed, the version information is displayed. If nothing is displayed, it means the package has not been installed. In this case, install the package in the usual way.

The version of the package contained in the Fujitsu product you are trying to install can be checked as follows:

```
# pkginfo -l -d <package file name> | egrep -e 'PKGINST|VERSION'
```

The result of the execution is shown below. Check the package name and version information (in bold below).

```
# pkginfo -l -d /cdrom/cdrom0/PKGS/FJSVsmee.pkgtrans | egrep -e 'PKGINST|VERSION'
  PKGINST:  FJSVsmee
  VERSION: 4.1.2
# pkginfo -l -d /cdrom/cdrom0/PKGS/FJSVslcr.pkgtrans | egrep -e 'PKGINST|VERSION'
  PKGINST:  FJSVslcr
  VERSION: 2.0.7
# pkginfo -l -d /cdrom/cdrom0/PKGS/FSUNssl.pkgtrans | egrep -e 'PKGINST|VERSION'
  PKGINST:  FSUNssl
```

3.1.1 Installing a Product Containing FJSVsmee, FJSVscrlr or FSUNssll Packages on a Machine on which Interstage is Already Installed

If the version of the FJSVsmee package bundled with the other product is the same or older than the FJSVsmee package bundled with Interstage, continue using the FJSVsmee package bundled with Interstage.

If the version of the FJSVscrlr package bundled with the other product is the same or older than the FJSVscrlr package bundled with Interstage, continue using the FJSVscrlr package bundled with Interstage.

If the version of the FSUNssll package bundled with the other product is the same or older than the FSUNssll package bundled with Interstage, continue using the FSUNssll package bundled with Interstage.

If any of the FJSVsmee, FJSVscrlr or FSUNssll packages bundled with the other product are later versions, install the other product as described in the following procedure.

1. If Interstage is running, stop it.

```
# isstop -f
```

Since there is a possibility that non-Interstage Fujitsu products that bundle FJSVsmee, FJSVscrlr or FSUNssll packages are also being used, stop all Fujitsu products. For details, refer to the appropriate product manual.

2. Uninstall old packages.

If the FJSVsmee package is old, execute the following:

```
# pkgrm FJSVsmee
```

If the FJSVscrlr package is old, execute the following:

```
# pkgrm FJSVscrlr
```

If the FSUNssll package is old, execute the following:

```
# pkgrm FSUNssll
```

3. Install the other Fujitsu products. For details, refer to the appropriate product manual.
4. Start Interstage.

```
# isstart
```

3.1.2 Installing Interstage on a Machine in which FJSVsmee, FJSVscrlr or FSUNssll Packages have been Installed by Another Product

Install Interstage according to the following procedure.

1. Stop all Fujitsu products. For details, refer to the appropriate product manual.

2. Uninstall the FJSVsmee, FJSVsclr and FSUNssl packages.

```
# pkgrm FJSVsmee
# pkgrm FJSVsclr
# pkgrm FSUNssl
```

3. Install Interstage.

4. If the version of the FJSVsmee, FJSVsclr or FSUNssl packages bundled and installed with Interstage is older than that of the packages already installed, uninstall the FJSVsmee, FJSVsclr and FSUNssl packages.

```
# pkgrm FJSVsmee
# pkgrm FJSVsclr
# pkgrm FSUNssl
```

Reinstall the FJSVsmee, FJSVsclr and FSUNssl packages that were installed prior to Interstage installation. For details, refer to the appropriate product manual.

5. Start all products stopped in step 1. For details, refer to the appropriate product manual.

3.2 Uninstall (middleware)

When this product is installed, "Uninstall (middleware)" will also be installed.

"Uninstall (middleware)" is the tool which is common to all Fujitsu middleware products. It is used to manage the information about Fujitsu middleware products that are installed, and to start the product uninstaller.

Note

- To uninstall Interstage, perform the uninstallation from "Uninstall (middleware)".
- This tool also manages information about Fujitsu middleware products other than Interstage. This tool must not be uninstalled, except when absolutely necessary.

If "Uninstall (middleware)" was uninstalled by mistake, reinstall it according to the following procedure:

1. Either log into the installation target machine as a super user, or switch to a user that has management privileges.
2. Insert the product DVD into the DVD-ROM drive.
3. Execute the installation command.

```
<Installation DVD-ROM>/installer/cir/cirinst.sh
```

To uninstall this tool, perform the following procedure:

1. Start "Uninstall (middleware)" and check whether other Fujitsu middleware products still remain. The start method is as follows:

```
# /opt/FJSVcir/cir/bin/cimanager.sh -c
```

2. If there are no Fujitsu middleware products installed, execute the following uninstallation command:

```
# /opt/FJSVcir/bin/cirremove.sh
```

3. The following message is displayed. Type **y** to continue.

After a few seconds, the uninstallation is complete.

```
This software is a common tool of Fujitsu products.  
Are you sure you want to remove it?[y/n]:
```

4. After the uninstallation is complete, delete the following directory and the files under it:

```
/var/opt/FJSVcir/
```

3.3 How to Mount the Product Media (DVD-ROM)

To mount the server package DVD of this product, it is recommended that you specify the HSFS file system in the mount command explicitly, as follows:

```
# mount -F hsfs -o ro /dev/dsk/<device file name> <DVD-ROM mount directory>
```

Note

The server package DVD of this product has been created in the "UDF Bridge" format. For this reason, it is possible to mount using the HSFS or UDF file systems. However, if the mount was performed using the UDF file system, the execution privileges for the execution file may sometimes be removed. In this case, problems such as being unable to execute the installer will occur.

Note that, depending on the operating system, the mount specification may sometimes be as shown below. The mount options for the mounted DVD-ROM can be checked by executing the *mount* command. To check the file system type, specify "-v" in the argument and then execute the command.

- If the DVD-ROM was mounted using automatic mount, or by omitting the file system option in the *mount* command, the mount will be performed using the UDF file system, therefore it will not be possible to execute the command on the DVD-ROM.

Note

If there is no DVD-ROM device, you can install this product by sharing an external server DVD-ROM device on the NFS mount.

In such cases, use the shared install.sh shell to perform installation with the usual procedure.

However, if the file permissions on the server where installation is to be performed have been changed or are limited, then pay attention to the settings when sharing the DVD-ROM device, as normal installation cannot be performed.

Chapter 4 Installation Procedure

This section explains the following methods of installing the Interstage Application Server "Server Package".

- [4.2 Installation Using Installation Shell Script](#)
- [4.3 Silent Installation](#)

4.1 Pre-installation Preparation

Essential Tasks before Beginning Installation

4.1.1 Check the available disk space

Verify that there is sufficient disk space for the installation. For details on disk capacity requirements, refer to "Disk Space" in [Chapter 2 System Requirements](#)

If there is insufficient available disk space, extend the file system.

4.1.2 Check the system parameters

System parameter tuning is required before running Interstage.

In `/etc/system`, modify the shared memory, semaphore, and message queue values appropriately. Refer to the "System Tuning" chapter of the Tuning Guide to calculate the parameter values.

4.1.3 Check this software

If an old version/level or a different edition of this software has been installed, the installation cannot be performed. Check the installation status of this software. If an old version/level or a different edition has been installed, back up the environment settings file and then remove this software before performing the installation. For details on how to back up the environment settings file, refer to the "Maintenance (Resource Backup)" chapter of the Operator's Guide. Additionally, for details on how to remove packages, refer to the "Uninstallation (Server Package)" chapter.

Note that "Uninstall (middleware)" can be used to check which version/level and edition of this software has been installed.

1. Execute the following command:

```
# /opt/FJSVcir/cimanager.sh -c
```

"Uninstall (middleware)" starts, and the names of products that are already installed are displayed.

2. To reference the product information details, enter the number for the corresponding product.

```
Loading Uninstaller...

Currently installed products
1. Interstage Application Server Enterprise Edition V11.1.0

Type [number] to select the software you want to uninstall.
[number,q]
=>1

Interstage Application Server Enterprise Edition
  Description: Interstage Application Server Enterprise Edition
  Version: V11.1.0
  Manufacturer: Fujitsu Limited.
  Install directory: /opt/FJSVisas
  Date of install: 2013-8-9
```

```
Starting the uninstall of the software. Are you sure you want to continue?
[y,b,q]
=>q
```

3. To uninstall the product that was selected, type **y**, and then press **Enter**. To return to the previous information, type **b**, and then press **Enter**. To cancel the uninstallation, type **q**, and then press **Enter**.

Note

- Using "Uninstall (middleware)", information about other Fujitsu middleware products can also be checked. Note that the product information for Interstage Application Server can be checked when the version/level is V11.0.0 or later. For details on supported versions for other Fujitsu middleware products, check the product manual, for example.
- If an old version/level of this software has been installed, the version/level and edition can be checked according to the method shown below.

```
/opt/FJSVisas/bin/isprintvl
```

4.1.4 Security Modes

4.1.4.1 Secure Mode

If secure mode is selected, the software is installed in a stricter security environment. Command execution permission assigned to all users in previous Application Server versions is only granted to users belonging to a nominated group in secure mode of version 9.

If this software is to be installed in secure mode, the group that will be assigned command execution permission must be created prior to installation.

Example

Creating a group called "isusergrp"

```
/usr/sbin/groupadd -g 500 isusergrp
```

Note

- The method used to create the group differs according to systems management policy. Check with the machine administrator.
- For details on security modes, refer to "Common Security Measures" in the "Security Measures" chapter of the Security System Guide and the "Notes on Using Commands" chapter of the Reference Manual (Command Edition).

4.1.4.2 Compatibility Mode

If compatibility mode is selected, security is the same as in previous Application Server versions. In this mode, no pre-installation preparation is required.

4.2 Installation Using Installation Shell Script

Install using multi-user mode.

If installing Server Package in multi-user mode, check that other users' operations do not affect the installation.

Install Server Package using the following procedure.

Certain functions and packages cannot be installed under Solaris 10 or Solaris 11. For details, refer to "[2.6 Notes on Interstage Installation Under Solaris 10 or Solaris 11](#)".

4.2.1 Execute install.sh

Insert the server package DVD into the DVD-ROM drive, mount on any directory, and then execute the install.sh shell. Note that the installation must be performed by a super user.

```
# <DVD-ROM mount directory>/install.sh <RETURN>
```

To perform the installation, answer to the install.sh prompts.

Note

- For details on the points that should be noted when mounting the server package DVD, refer to "[3.3 How to Mount the Product Media \(DVD-ROM\)](#)".
- When install.sh is executed, it may take a while until the installation messages from the installer is displayed.
- The installation cannot be performed to a path containing blank spaces or shell regular expression characters.
- When Interstage Application Server is installed in an environment containing a common package that is bundled with another product, the "Typical" installation cannot be used.
- If the message below is displayed, it is possible that either a shared package bundled with another product has been installed or that a previously installed package from this product remains. If the former is the case, then refer to "[Chapter 3 Important Notes on Installation](#)" or to the manual for the relevant product, and install using the correct procedure. If the latter is the case, then uninstall the package and reinstall the server package.
"Apart from the required package (FJSVisas), some packages are already installed. Another Fujitsu middleware product may already be installed."
- If you chose not to use SSL encryption, the ID and password used to access the Interstage Java EE Admin Console/Interstage Management Console are transferred across the network unencrypted. Ensure that appropriate measures are in place to prevent interception of communication data.

4.2.1.1 Selecting the Security Mode

Select the security mode. If no value is entered, it defaults to option 1, secure mode.

```
Please select the security mode. (1: Secure mode, 2: Compatibility mode) (default: 1) [1,2,q]:
```

If 1 (secure mode) is entered, the group name must then be input, and if 2 (compatibility mode) is entered, the server type must be selected.

4.2.1.2 Nominating a Group Name for Full Control in Secure Mode

Enter the group name that will have access to run all Interstage Application Server operation commands. The group must already exist in the system - if no value is entered, this defaults to "root".

```
Please enter the group name of the system used to operate the Interstage operation command. (default: root) [?,q]:
```

Note

If a number is specified for the group name, its validity is not checked. Specifying an invalid number may result in installation or operation failure.

4.2.1.3 Selecting the Server Type

If Application Server is selected, select typical or custom.

(Enterprise Edition only)

```
Please choose the server type to install. (1: Application Server, 2: Admin Server, 3: Web Package)
[1,2,3,q]:
```

(Standard-J Edition only)

```
Please choose the server type to install. (1: Application Server, 2: Web Package) [1,2,q]:
```

4.2.1.4 Performing a Typical Installation

To perform a typical installation, type **1** to select "typical" as the type of installation to be performed, and then press **Enter**.

```
Please select the installation type. (1: typical, 2: custom) [1,2,q]:
```

Display the port numbers to be used in Java EE. To change them, type **y** and then press **Enter**.

```
The Java EE function default port is as follows:
```

```
Port Number of HTTP Listener:                28080
Port Number of HTTP Listener for Operation Management: 12001
Port Number of IIOP:                          23600
Port Number of IIOP_SSL:                      23601
Port Number of IIOP_MUTUALAUTH:               23602
Port Number of JMX_ADMIN:                     8686
```

```
Change the default port? (default: n) [y,n,q]:
```

Set the port numbers to be used in Java EE. For each port, specify a number between 1 and 65535 that has not been set for another function.

```
Please specify the Port Number of HTTP Listener. (default: 28080) [?,q]:
Please specify the Port Number of HTTP Listener for Operation Management. (default: 12001) [?,q]:
Please specify the Port Number of IIOP. (default: 23600) [?,q]:
Please specify the Port Number of IIOP_SSL. (default: 23601) [?,q]:
Please specify the Port Number of IIOP_MUTUALAUTH. (default: 23602) [?,q]:
Please specify the Port Number of JMX_ADMIN. (default: 8686) [?,q]:
```

Select the security operation configuration of Java EE HTTP Listener for Operation Management.

```
Please select whether to use SSL encryption communication for Java EE HTTP Listener for Operation
Management. (default: y) [y,n,q]
```

Notes

If you selected not to use SSL encryption, the ID and password used to access the Interstage Java EE Admin Console are transferred across the network unencrypted. Ensure that appropriate measures are in place to prevent communication data from being intercepted.

Set the Java EE common directory.

Notes

- To change the Java EE common directory from the default value, specify a directory that does not already exist, or an empty directory that does not contain files or subdirectories. In either case, however, a parent directory must exist. Symbolic links cannot be specified.

- Do not specify "/" (the root directory) for the directory.

```
Please specify the Java EE common directory. (default: /var/opt/FJSVisjee) [?,q]:
```

Check the displayed installation settings. To start installation, type **y**, and then press **Enter** in response to the following prompt.

```
Do you want to proceed with the installation ? [y,q]:
```

4.2.1.5 Performing a Custom Installation

To install using the install.sh shell, you may choose either **Select Function** or **Select Package**.

Choose **Select Function** to install the functions you want to use. The package required for the corresponding function is installed automatically.

Choose **Select Package** to install the packages you want to use. More packages are available for this option than for the **Select Function** option. By selecting **Select Package**, you can choose which packages you want to install.

To perform a custom installation, type **2** to select "custom" as the type of installation to be performed, and then press **Enter**.

```
Please select the installation type. (1: typical, 2: custom) [1,2,q]:
```

4.2.1.5.1 Select the "function" installation

Type **1** to select the "function" installation, and then press **Enter**.

```
Please select whether to choose functions or packages to install. (1: function, 2: package) [1,2,q]:
```

The function list is displayed. Select "all" or the number of each function to be installed.

```
Functions:
 1 Java EE
   :
Please select functions. When you choose more than one, please separate with ",".[?,?,all,q]:
```

Note

- If Java EE or Java EE 6 is added to an environment in which JRE has already been installed, JRE must be uninstalled before the function is added.

4.2.1.5.2 Select the "package" installation

Type **2** to select the "package" installation, and then press **Enter**.

```
Please select whether to choose functions or packages to install. (1: function, 2: package) [1,2,q]:
```

Note

- Dependency relationships between packages are not automatically resolved with "Package Selection". We recommend installing with "Select Features" unless you have a high degree of knowledge about each package or the setup procedure has been clarified for you by Fujitsu technical support.

- We recommend installing all required features and packages at the same time, in a single run of the install.sh shell.

The package list is displayed. Select "all" or the number of each package to be installed.

```

Packages:
  1 FJSVtdis      The operational commands for Interstage
  2 FSUNextp     Transaction Processing Monitor
  :
Please select packages. When you choose more than one, please separate with ",". [?,??,all,q]: all

```

Note

- If Java EE or Java EE 6 is added to an environment in which JRE has already been installed, JRE must be uninstalled before the function is added.

Display the port numbers to be used in Java EE. To change them, type **y**, and then press **Enter**.

```

The Java EE function default port is as follows:

Port Number of HTTP Listener:                28080
Port Number of HTTP Listener for Operation Management: 12001
Port Number of IIOP:                          23600
Port Number of IIOP_SSL:                      23601
Port Number of IIOP_MUTUALAUTH:               23602
Port Number of JMX_ADMIN:                     8686

Change the default port? (default: n) [y,n,q]:

```

Set the port numbers to be used in Java EE. For each port, specify a number between 1 and 65535 that has not been set for another function. The range that can be specified in the HTTP Listener port becomes 5001-65535 when Web Server Connector/J2EE Compatible function (FJSVjs5) has been installed or it selects it at the same time.

```

Specify the Java EE HTTP Listener port. (default: 28080) [?,q]:
Specify the Java EE HTTP Listener port for Operation Management. (default: 12001) [?,q]:
Specify the Java EE IIOP port. (default: 23600) [?,q]:
Specify the Java EE IIOP_SSL port. (default: 23601) [?,q]:
Specify the Java EE IIOP_MUTUALAUTH port. (default: 23602) [?,q]:
Specify the Java EE JMX_ADMIN port. (default: 8686) [?,q]:

```

Select the security operation configuration of Java EE HTTP Listener for Operation Management.

```

Please select whether to use SSL encryption communication for Java EE HTTP Listener for Operation Management.
(default: y) [y,n,q]

```

Notes

If you selected not to use SSL encryption, the ID and password used to access the Interstage Java EE Admin Console are transferred across the network unencrypted. Ensure that appropriate measures are in place to prevent communication data from being intercepted.

Set the Java EE common directory.

Notes

- To change the Java EE common directory from the default value, specify a directory that does not already exist, or an empty directory that does not contain files or subdirectories. In either case, however, a parent directory must exist. Symbolic links cannot be specified.

- Do not specify "/" (the root directory) for the directory.

```
Please specify the Java EE common directory. (default: /var/opt/FJSVisjee) [?,q]:
```

Enter the port number of CORBA Service. (Enterprise Edition only)

Note

If a port number not set as "odserver" in /etc/services is used for the CORBA service port number, then the message "Overwrite /etc/services setting? [y,n,q]:" is displayed. Make sure it will not cause a problem.

```
Please specify port number of CORBA Service. (default: 8002) [?,q]:
```

Enter the port number of Interstage Service. (Standard-J Edition only)

Note

If a port number not set as "odserver" in /etc/services is used for the CORBA service port number, then the message "Overwrite /etc/services setting? [y,n,q]:" is displayed. Make sure it will not cause a problem.

```
Please specify port number of Interstage Service. (default: 8002) [?,q]:
```

Select whether "JDK" or "JRE" is to be used.

Note

- If multiple versions of JDK/JRE were selected, it will not be possible to install the different types (JDK and JRE). Additionally, if one version of JDK or JRE is already installed, the JDK or JRE type that is already installed will be selected automatically and this prompt will not be displayed.
- When Java EE (FJSVisjee) or Java EE 6 (FJSVisje6) is selected or has already been installed, then "JDK" will be automatically selected without the message below being displayed.

```
Please select JDK or JRE. (1: JDK, 2: JRE) (default: 1) [1,2,q]
```

Enter the port number and the hostname of the Web Server (Interstage HTTP Server).

```
Please specify host name of Web server (Interstage HTTP Server). (default: host01) [?,q]:
```

```
Please specify port number of Web server (Interstage HTTP Server). (default: 80) [?,q]:
```

Set the J2EE common directory.

Notes

- To change the J2EE common directory from the default value, specify a directory that does not already exist.
- Do not specify "/" (the root directory) for the directory.

```
Please specify the J2EE common directory. (default: /opt/FJSVj2ee/var/deployment) [?,q]:
```

Enter the port number and the hostname of the Interstage Management Console.

```
Please specify host name of Interstage Management Console. (default: host01) [?,q]:
```

Please specify port number of Interstage Management Console. (default: 12000) [?,q]:

If using SSL communication on the Interstage Management Console, type **y** and then press **Enter**.

Note

If you selected not to use SSL encryption, the ID and password used to access the Interstage Management Console are transferred across the network unencrypted. Ensure that appropriate measures are in place to prevent communication data from being intercepted.

Please select whether to use SSL encryption communication for Interstage Management Console. (default: y) [y,n,q]

To use the Message Manual for Interstage Management Console, type **y**, and then press **Enter**.

Please select whether to use Message Manual for Interstage Management Console. (default: y) [y,n,q]:

Enter the port number of the Web Server (Interstage HTTP Server 2.2).

Please specify port number of Web server (Interstage HTTP Server 2.2). (default: 80) [?,q]:

Select the JDK to be used in Java EE 6. This prompt is displayed when multiple versions of JDK have been installed, or are selected at the same time.

Please select the JDK to be used in Java EE 6 function. (1: JDK7, 2: JDK6) (default: 1) [1,2,q]:

Configure the Java EE 6 administrator user-related settings.

Specify the Java EE 6 function admin user ID. (default: admin) [?,q]:

Specify a Java EE 6 function Admin password. (between 8 and 20 characters long) [?,q]:

Re-enter the Java EE 6 function Admin password in order to confirm it. [?,q]:

Note

- Specify up to 255 characters for the administrator user name. Note that in addition to alphanumeric characters, it can also contain:
 - _ (underscore)
 - (hyphen)
 - . (period)
- Specify up to 20 characters for the administrator password. Note that in addition to alphanumeric characters, it can also contain:
 - _ (underscore)
 - (hyphen)
 - ' (apostrophe)
 - . (period)
 - @ (at sign)
 - + (plus sign)

The port numbers to be used by Java EE 6 are displayed - to change any of them, type **y**, and then press **Enter**.

The Java EE 6 function default port is as follows.

Port Number of HTTP Listener for Operation Management:	12011
Port Number of HTTP Listener:	28282
Port Number of HTTPS Listener:	28383
Port Number of IIOP:	23610
Port Number of IIOP_SSL:	23611
Port Number of IIOP_MUTUALAUTH:	23612
Port Number of JMX_ADMIN:	18686

```
Change the default port? (default: n) [y,n,q]:
```

Type the port numbers to be used by Java EE 6 - specify values between 1 and 65535, ensuring that they do not conflict with port numbers assigned to other features.

```
Please specify the Port Number of HTTP Listener for Operation Management. (default: 12011) [?,q]:
```

```
Please specify the Port Number of HTTP Listener. (default: 28282) [?,q]:
```

```
Please specify the Port Number of HTTPS Listener. (default: 28383) [?,q]:
```

```
Please specify the Port Number of IIOP. (default: 23610) [?,q]:
```

```
Please specify the Port Number of IIOP_SSL. (default: 23611) [?,q]:
```

```
Please specify the Port Number of IIOP_MUTUALAUTH. (default: 23612) [?,q]:
```

```
Please specify the Port Number of JMX_ADMIN. (default: 18686) [?,q]:
```

```
Please specify the Java EE 6 common directory. (default: /var/opt/FJSVisje6) [?,q]:
```

Specify the Java EE 6 common directory.

```
Please specify the Java EE 6 common directory. (default: /var/opt/FJSVisje6) [?,q]:
```

Note

To change the Java EE 6 common directory from the default value, specify a directory that does not exist, or an empty directory that does not contain files or subdirectories. In either case, however, a parent directory must exist. Do not enter a forward slash ("/", root directory).

Check the displayed installation settings. To start the installation, type **y**, and then press **Enter** in response to the following prompt.

```
Do you want to proceed with the installation ? [y,q]:
```

4.2.2 Check that the Installation is Complete

When the installation process has been completed, the following message is displayed.

```
Installation of Interstage Application Server has ended.Please reboot system.  
After restarting the system, refer to the Installation Guide and perform the required tasks.
```

Note

If an error message was displayed and the installation finished, check the error message that was displayed immediately before or during the installation, remove the cause of the error and then re-execute the installation.

4.2.3 System Reboot

Reboot the system.

```
# cd / <RETURN>  
# /usr/sbin/shutdown -y -i6 -g0 <RETURN>
```

4.2.4 Start Interstage

When the machine starts, Interstage is started when an automatic setup is executed.

4.3 Silent Installation

This section explains the silent installation of Interstage.

Normally, when this product is installed, the user is prompted to select the functionality required. However, with silent installation, the installation is executed according to the parameters specified before the installation is executed. The installation runs without user input. Note that silent installation can be used for new installations of Interstage.

Execute the silent installation according to the following procedure:

- [4.3.1 Create the Installation Parameter CSV File](#)
- [4.3.2 Execute the Silent Installation](#)

4.3.1 Create the Installation Parameter CSV File

Consider the server type or functionality that is required in the system operation, and then create the installation parameter CSV file according to the format shown below.

Note

The installation parameter CSV file samples are stored in the following directory:

```
<server package DVD>/installer/citool/sample
```

4.3.1.1 Format

Define the installation parameter CSV file in three column CSV format on each line.

```
section name,parameter name,settings
section name,parameter name,settings
:
```

Set the following in each column:

Item	Content
Section name	Set the section name. Note that there are two types. These are as follows: "installinfo": Set the product information. "parameters": Set the settings parameter information of this product.
Parameter name	Set the parameter name. There are parameters which are enabled for each section.
Settings	Configure the settings.

Note

- The file cannot contain blank lines.
- Section names and parameter names cannot be omitted.
- Undefined parameters cannot be set on the line where the section name is "installInfo". Additionally, the same parameter cannot be set multiple times.

- If an undefined parameter was set on the line where the section name is "parameters", it will be ignored at the time of execution. Additionally, if the same parameter was defined multiple times, the settings on the line below will be valid.

4.3.1.2 List of Parameters

The parameters that can be set for each section are explained below.

4.3.1.2.1 installInfo Section

Parameter	Content
Name	Set the installer name. In this product, set the following fixed value: "isasinst"

Note

The parameters that can be used in the installInfo section are "softwareName", "OS", "Version", and "Edition". The settings for this parameter do not affect the silent installation.

Note that, in the settings of the parameters above, a string comprised of at least one alphanumeric character, or symbol excluding double quotes (") and commas (,), is valid.

4.3.1.2.2 Parameters Section

Enterprise Edition

Parameter	Content
ServerType	Set the server type.
InstallType	Set the installation type.
InstallPath	Set the directory that is used to install programs.
ConfigurationPath	Set the directory that is used to install definition files.
TemporaryPath	Set the directory that is used to store temporary files.
SecurityMode	Set the security mode.
SecurityGroup	Set the Interstage operator group name.
JavaSEKind	Set the Java SE JDK/JRE type.
JavaEE5HttpListenerPort	Set the "HTTP Listener Port" to be used in Java EE 5.
JavaEE5AdminListenerPort	Set the "Operation Management HTTP Listener Port" to be used in Java EE 5.
JavaEE5IiopPort	Set the "IIOP Port" to be used in Java EE 5.
JavaEE5IiopSSLPort	Set the "IIOP_SSL Port" to be used in Java EE 5.
JavaEE5IiopMutualauthPort	Set the "IIOP_MUTUALAUTH Port" to be used in Java EE 5.
JavaEE5JmxAdminPort	Set the "JMX_ADMIN Port" to be used in Java EE 5.
JavaEE5CommonDirectory	Set the "Java EE Common Directory" to be used in Java EE 5.
JavaEE5AdminSSL	Set the Interstage Java EE Admin Console security operating mode to be used in Java EE 5.
JavaEE6JdkVersion	Set the JDK version to be used in Java EE 6.
JavaEE6AdminUser	Set the administrator user ID to be used in Java EE 6.
JavaEE6AdminPassword	Set the administrator password to be used in Java EE 6.
JavaEE6DomainAdminPort	Set the "Operation Management HTTP Listener Port" to be used in Java EE 6.

Parameter	Content
JavaEE6HttpListenerPort	Set the "HTTP Listener Port" to be used in Java EE 6.
JavaEE6HttpsListenerPort	Set the "HTTPS Listener Port" to be used in Java EE 6.
JavaEE6IiopPort	Set the "IIOP Port" to be used in Java EE 6.
JavaEE6IiopSSLPort	Set the "IIOP_SSL Port" to be used in Java EE 6.
JavaEE6IiopMutualauthPort	Set the "IIOP_MUTUALAUTH Port" to be used in Java EE 6.
JavaEE6JmxAdminPort	Set the "JMX_ADMIN Port" to be used in Java EE 6.
JavaEE6CommonDirectory	Set the "Java EE Common Directory" to be used in Java EE 6.
CorbaPort	Set the port number of the CORBA service to be used in the multilanguage service basic functionality.
CorbaSample	Set whether to install the CORBA service samples.
HostName	Set the host name.
MngConsolePort	Set the Interstage Management Console port number.
MngConsoleSSL	Set the Interstage Management Console security operating mode.
MngConsoleMessageManual	Set whether to install the Message Manual with the Interstage Management Console.
WebServerPort	Set the Web Server (Interstage HTTP Server) port number.
WebServer22Port	Set the Web Server (Interstage HTTP Server 2.2) port number.
J2eeCommonDirectory	Set the "J2EE Common Directory" to be used in J2EE compatibility.
FN_functionality name	If "custom" was specified in the InstallType parameter, set the "FN_functionality name" format parameter according to the functionality that is to be installed.

Standard-J Edition

Parameter	Content
ServerType	Set the server type.
InstallType	Set the installation type.
InstallPath	Set the directory that is used to install programs.
ConfigurationPath	Set the directory that is used to install definition files.
TemporaryPath	Set the directory that is used to store temporary files.
SecurityMode	Set the security mode.
SecurityGroup	Set the Interstage operator group name.
JavaSEKind	Set the Java SE JDK/JRE type.
JavaEE5HttpListenerPort	Set the "HTTP Listener Port" to be used in Java EE 5.
JavaEE5AdminListenerPort	Set the "Operation Management HTTP Listener Port" to be used in Java EE 5.
JavaEE5IiopPort	Set the "IIOP Port" to be used in Java EE 5.
JavaEE5IiopSSLPort	Set the "IIOP_SSL Port" to be used in Java EE 5.
JavaEE5IiopMutualauthPort	Set the "IIOP_MUTUALAUTH Port" to be used in Java EE 5.
JavaEE5JmxAdminPort	Set the "JMX_ADMIN Port" to be used in Java EE 5.
JavaEE5CommonDirectory	Set the "Java EE Common Directory" to be used in Java EE 5.

Parameter	Content
JavaEE5AdminSSL	Set the Interstage Java EE Admin Console security operating mode to be used in Java EE 5.
JavaEE6JdkVersion	Set the JDK version to be used in Java EE 6.
CorbaPort	Set the port number of the CORBA service to be used in the multilanguage service basic functionality.
HostName	Set the host name.
MngConsolePort	Set the Interstage Management Console port number.
MngConsoleSSL	Set the Interstage Management Console security operating mode.
MngConsoleMessageManual	Set whether to install the Message Manual with the Interstage Management Console.
WebServerPort	Set the Web Server (Interstage HTTP Server) port number.
J2eeCommonDirectory	Set the "J2EE Common Directory" to be used in J2EE compatibility.
FN_functionality name	If "custom" was specified in the InstallType parameter, set the "FN_functionality name" format parameter according to the functionality that is to be installed.

4.3.1.2.3 Parameters Section (for Selecting the Functionality)

If "custom" was selected in InstallType, use the parameters shown below that assign the installation functionality, and then select the installation functionality.

Enterprise Edition

Parameter	Functionality
FN_JAVAAE5	Java EE 5
FN_CORBA	Multilanguage Service Basic Functionality
FN_OTS	Database Linkage Service
FN_ES	Event Service
FN_MQD	MessageQueueDirector
FN_PORB	Portable-ORB
FN_WEBSERVER	Web Server (Interstage HTTP Server)
FN_WEBSERVER22	Web Server (Interstage HTTP Server 2.2)
FN_SECURE_COMMUNICATION	Secure Communication Service
FN_SSO_BS	Interstage Single Sign-on (Business Server)
FN_SSO_AS	Interstage Single Sign-on (Authentication Server)
FN_SSO_RS	Interstage Single Sign-on (Repository Server)
FN_DIRECTORY_SERVICE	Interstage Directory Service
FN_MANAGEMENT_CONSOLE	Interstage Management Console
FN_WEBSERVER_CONNECTOR	Web Server Connector (for Interstage HTTP Server)
FN_WEBSERVER_CONNECTOR22	Web Server Connector (for Interstage HTTP Server 2.2)
FN_J2EE	J2EE Compatibility
FN_FRAMEWORK	Framework
FN_JAVASE6	Java SE 6
FN_JAVASE7	Java SE 7

Parameter	Functionality
FN_SAMPLE_APL	Sample Application
FN_XML	Fujitsu XML Processor
FN_JAVAAEE6	Java EE 6

Standard-J Edition

Parameter	Functionality
FN_JAVAAEE5	Java EE 5
FN_WEBSERVER	Web Server (Interstage HTTP Server)
FN_WEBSERVER22	Web Server (Interstage HTTP Server 2.2)
FN_SECURE_COMMUNICATION	Secure Communication Service
FN_SSO_BS	Interstage Single Sign-on (Business Server)
FN_SSO_AS	Interstage Single Sign-on (Authentication Server)
FN_SSO_RS	Interstage Single Sign-on (Repository Server)
FN_DIRECTORY_SERVICE	Interstage Directory Service
FN_MANAGEMENT_CONSOLE	Interstage Management Console
FN_WEBSERVER_CONNECTOR	Web Server Connector (for Interstage HTTP Server)
FN_WEBSERVER_CONNECTOR22	Web Server Connector (for Interstage HTTP Server 2.2)
FN_J2EE	J2EE Compatibility
FN_FRAMEWORK	Framework
FN_JAVASE6	Java SE 6
FN_JAVASE7	Java SE 7
FN_SAMPLE_APL	Sample Application
FN_XML	Fujitsu XML Processor
FN_JAVAAEE6	Java EE 6

4.3.1.3 Parameter Details

The section explains the content to be set for each parameter.

4.3.1.3.1 ServerType

Enterprise Edition

Content	Set the server type to be installed. Select one of: Application Server Admin Server WebPackage
Related functionality	Common
Valid settings	application [Application Server] management [Admin Server] webpackage [WebPackage]
Default value	application
Remarks	

Standard-J Edition

Content	Set the server type to be installed. Select one of: Application Server WebPackage
Related functionality	Common
Valid settings	application [Application Server] webpackage [WebPackage]
Default value	application
Remarks	

4.3.1.3.2 InstallType

Content	Set the server type to be installed. This parameter is enabled if "application" was selected in InstallType. Select one of: typical installation custom installation full functionality installation
Related functionality	Common
Valid settings	typical [Typical installation] custom [[Custom installation] full [Full functionality installation]
Default value	typical
Remarks	If the custom installation was specified, select the functionality that is to be installed using the "FN_functionality name" parameter. If the "FN_functionality name" parameter does not exist, or all the settings are "N", only the mandatory functionality will be installed.

4.3.1.3.3 InstallPath

Content	Set the installation destination of the program files.
Related functionality	Common
Valid settings	Path string (absolute path) Specify a path that exists. "/" (root path), paths that contain blank spaces, or tabs cannot be specified. The same path as ConfigurationPath and TemporaryPath cannot be specified.
Default value	/opt
Remarks	

4.3.1.3.4 ConfigurationPath

Content	Set the installation destination of the definition files.
Related functionality	Common
Valid settings	Path string (absolute path)

	Specify a path that exists. "/" (root path), paths that contain blank spaces, or tabs cannot be specified. The same path as InstallPath and TemporaryPath cannot be specified.
Default value	/etc/opt
Remarks	

4.3.1.3.5 TemporaryPath

Content	Set the installation destination of the temporary files.
Related functionality	Common
Valid settings	Path string (absolute path) Specify a path that exists. "/" (root path), paths that contain blank spaces, or tabs cannot be specified. The same path as InstallPath and ConfigurationPath cannot be specified.
Default value	/var/opt
Remarks	

4.3.1.3.6 SecurityMode

Content	Set the security mode.
Related functionality	Common
Valid settings	secure [secure mode] compatible [Compatibility mode]
Default value	secure
Remarks	

4.3.1.3.7 SecurityGroup

Content	Set the Interstage operator group name. This parameter is enabled if "secure" was set in SecurityMode.
Related functionality	Common
Valid settings	Group name
Default value	root
Remarks	The group that is set in this parameter must be created before the silent installation is performed.

4.3.1.3.8 JavaSEKind

Content	Set the Java SE type (JDK or JRE) that is to be installed.
Related functionality	Java SE 6 Java SE 7
Valid settings	JDK JRE

Default value	JDK
Remarks	If Java EE 5 or Java EE 6 has been selected, JDK will be installed regardless of the setting of this parameter.

4.3.1.3.9 JavaEE5HTTPListenerPort

Content	Set the HTTP listener port to be used in Java EE 5.
Related functionality	Java EE 5
Valid settings	Numeric (1-65535)
Default value	28080
Remarks	To install the web server connector, specify a range between 5001 and 65535.

4.3.1.3.10 JavaEE5AdminListenerPort

Content	Set the operation management HTTP listener port to be used in Java EE 5.
Related functionality	Java EE 5
Valid settings	Numeric (1-65535) Note: The value that is specified cannot be the same as another port number.
Default value	12001
Remarks	

4.3.1.3.11 JavaEE5IiopPort

Content	Set the IIOP port to be used in Java EE 5.
Related functionality	Java EE 5
Valid settings	Numeric (1-65535) Note: The value that is specified cannot be the same as another port number.
Default value	23600
Remarks	

4.3.1.3.12 JavaEE5IiopSSLPort

Content	Set the IIOP_SSL port to be used in Java EE 5.
Related functionality	Java EE 5
Valid settings	Numeric (1-65535) Note: The value that is specified cannot be the same as another port number.
Default value	23601
Remarks	

4.3.1.3.13 JavaEE5IiopMutualauthPort

Content	Set the IIOP_MUTUALAUTH port to be used in Java EE 5.
----------------	---

Related functionality	Java EE 5
Valid settings	Numeric (1-65535) Note: The value that is specified cannot be the same as another port number.
Default value	23602
Remarks	

4.3.1.3.14 JavaEE5JmxAdminPort

Content	Set the JMX_ADMIN port to be used in Java EE 5.
Related functionality	Java EE 5
Valid settings	Numeric (1-65535) Note: The value that is specified cannot be the same as another port number.
Default value	8686
Remarks	

4.3.1.3.15 JavaEE5CommonDirectory

Content	Set the path of the Java EE 5 common directory to be used in Java EE 5.
Related functionality	Java EE 5
Valid settings	Path string (absolute path) To specify a path other than the default value, specify a directory that does not exist, or an empty directory that does not contain files or subdirectories. In either case, however, a parent directory must exist. Symbolic links cannot be specified. Paths that contain blank spaces or tabs cannot be specified.
Default value	\${TemporaryPath}/FJSVisjee
Remarks	

4.3.1.3.16 JavaEE5AdminSSL

Content	Set the Java EE Admin Console security operating mode (when SSL encrypted communication is used). To use SSL encryption, specify "Y". If you do not want to use SSL encryption, specify "N".
Related functionality	Java EE 5
Valid settings	Y N
Default value	Y
Remarks	

4.3.1.3.17 JavaEE6JdkVersion

Content	Set the JDK version to be used in Java EE 6.
Related functionality	Java EE 6
Valid settings	JDK6

	JDK7
Default value	JDK7
Remarks	This parameter is enabled if both Java SE 6 and Java SE 7 are installed.

4.3.1.3.18 JavaEE6AdminUser

Content	Set the administrator user ID to be used in Java EE 6.
Related functionality	Java EE 6
Valid settings	String (up to 255 characters) * Note that in addition to alphanumeric characters, it can also contain: _ (underscore) - (hyphen) . (period)
Default value	admin
Remarks	-

4.3.1.3.19 JavaEE6AdminPassword

Content	Set the administrator password to be used in Java EE 6.
Related functionality	Java EE 6
Valid settings	String (up to 20 characters) * Note that in addition to alphanumeric characters, it can also contain: _ (underscore) - (hyphen) . (period) @ (at sign) + (plus sign)
Default value	None.
Remarks	You must configure this setting when installing Java EE 6. You must also take care how you handle the installation parameter CSV file that sets this parameter, since it is sensitive information. Note that when performing silent installation, you cannot use " ' " (apostrophe) in this parameter.

4.3.1.3.20 JavaEE6DomainAdminPort

Content	Set the "Operation Management HTTP Listener Port" to be used in Java EE 6.
Related functionality	Java EE 6
Valid settings	Numeric (1-65535) Note: The specified value cannot be the same as another port number.
Default value	12011
Remarks	-

4.3.1.3.21 JavaEE6HttpListenerPort

Content	Set the "HTTP Listener Port" to be used in Java EE 6.
Related functionality	Java EE 6
Valid settings	Numeric (1-65535) Note: The specified value cannot be the same as another port number.
Default value	28282
Remarks	-

4.3.1.3.22 JavaEE6HttpsListenerPort

Content	Set the "HTTPS Listener Port" to be used in Java EE 6.
Related functionality	Java EE 6
Valid settings	Numeric (1-65535) * The specified port cannot be already in use.
Default value	28383
Remarks	-

4.3.1.3.23 JavaEE6IOPort

Content	Set the "IOP Port" to be used in Java EE 6.
Related functionality	Java EE 6
Valid settings	Numeric (1-65535) Note: The specified value cannot be the same as another port number.
Default value	23610
Remarks	-

4.3.1.3.24 JavaEE6IOPortSSL

Content	Set the "IOP_SSL Port" to be used in Java EE 6.
Related functionality	Java EE 6
Valid settings	Numeric (1-65535) Note: The specified value cannot be the same as another port number.
Default value	23611
Remarks	-

4.3.1.3.25 JavaEE6IOPortMutualauth

Content	Set the "IOP_MUTUALAUTH Port" to be used in Java EE 6.
Related functionality	Java EE 6
Valid settings	Numeric (1-65535) Note: The specified value cannot be the same as another port number.
Default value	23612
Remarks	-

4.3.1.3.26 JavaEE6JmxAdminPort

Content	Set the "JMX_ADMIN Port" to be used in Java EE 6.
Related functionality	Java EE 6
Valid settings	Numeric (1-65535) Note: The specified value cannot be the same as another port number.
Default value	18686
Remarks	-

4.3.1.3.27 JavaEE6CommonDirectory

Content	Set the path of the "Java EE Common Directory" to be used in Java EE 6.
Related functionality	Java EE 6
Valid settings	Path string (absolute path) To specify a path other than the default value, specify a directory that does not exist, or an empty directory that does not contain files or subdirectories. In either case, however, a parent directory must exist. You cannot specify "/" (the root directory).
Default value	/var/opt/FJSVisje6
Remarks	-

4.3.1.3.28 JavaEE6CommonDirectory

Content	Set the "Java EE Common Directory" path to be used in Java EE 6.
Related functionality	Java EE 6
Valid settings	Path string (absolute path) To specify a path other than the default value, specify a directory that does not exist, or an empty directory that does not contain files or subdirectories. In either case, however, a parent directory must exist. You cannot specify "/" (the root directory) for the directory.
Default value	\${TemporaryPath}/FJSVisje6
Remarks	-

4.3.1.3.29 CorbaPort

Enterprise Edition

Content	Set the CORBA service port number.
Related functionality	Multilanguage Service Basic Functionality
Valid settings	Numeric (1-65535) Note: The value that is specified cannot be the same as another port number. Additionally, port numbers registered in services other than "odserver" in "/etc/services" cannot be specified.
Default value	8002
Remarks	

Standard-J Edition

Content	Set the Interstage service port number.
Related functionality	Interstage Management Console, J2EE Compatibility
Valid settings	Numeric (1-65535) Note: The value that is specified cannot be the same as another port number. Additionally, port numbers registered in services other than "odserver" in "/etc/services" cannot be specified.
Default value	8002
Remarks	

4.3.1.3.30 CorbaSample

Enterprise Edition

Content	Set whether to install the CORBA service samples. To install the CORBA service samples, set "Y". If you do not want to install the CORBA service samples, set "N".
Related functionality	Multilanguage Service Basic Functionality
Valid settings	Y N
Default value	Y
Remarks	

4.3.1.3.31 HostName

Content	Set the host name.
Related functionality	Interstage Management Console, web server
Valid settings	Host name
Default value	The value returned in uname -n is set as the default value.
Remarks	

4.3.1.3.32 MngConsolePort

Content	Set the port number to be used with the Interstage Management Console.
Related functionality	Interstage Management Console
Valid settings	Numeric (1-65535) Note: The value that is specified cannot be the same as another port number.
Default value	12000
Remarks	

4.3.1.3.33 MngConsoleSSL

Content	Set the Interstage Management Console security operating mode (when SSL encrypted communication is used). To use SSL encryption, specify "Y". If you do not want to use SSL encryption, specify "N".
Related functionality	Interstage Management Console
Valid settings	Y

	N
Default value	Y
Remarks	

4.3.1.3.34 MngConsoleMessageManual

Content	Set whether to install the Message Manual that is used with the Interstage Management Console. To install the Message Manual, specify "Y". If you do not want to install the Messages Manual, specify "N".
Related functionality	Interstage Management Console
Valid settings	Y N
Default value	Y
Remarks	

4.3.1.3.35 WebServerPort

Content	Set the port number to be used with the Web Server (Interstage HTTP Server).
Related functionality	Web Server (Interstage HTTP Server)
Valid settings	Numeric (1-65535) Note: The value that is specified cannot be the same as another port number.
Default value	80
Remarks	During installation of application server features (Server type), if you are installing Web Server (Interstage HTTP Server) and Web Server (Interstage HTTP Server 2.2) at the same time, you must change one of their port numbers, because their default values are identical.

4.3.1.3.36 WebServer22Port

Content	Set the port number to be used with the Web Server (Interstage HTTP Server 2.2).
Related functionality	Web Server (Interstage HTTP Server 2.2)
Valid settings	Numeric (1-65535) Note: The specified value cannot be the same as another port number.
Default value	80
Remarks	During installation of application server features (Server type), if you are installing Web Server (Interstage HTTP Server) and Web Server (Interstage HTTP Server 2.2) at the same time, you must change one of their port numbers, because their default values are identical.

4.3.1.3.37 J2eeCommonDirectory

Content	Set the path of the J2EE common directory.
Related functionality	J2EE compatibility
Valid settings	Path string (absolute path)

	Specify a path that exists, except for when the path that is set is the same as the default value. "/" (root path), paths that contain blank spaces, or tabs cannot be specified.
Default value	\${InstallPath}/FJSVj2ee/var/deployment
Remarks	

4.3.1.3.38 FN_functionality name

Content	Set whether to install the corresponding functionality. This parameter is enabled if "custom" was set in the InstallType parameter.
Related functionality	Common
Valid settings	Y N
Default value	N
Remarks	For details on the parameter names, refer to 4.3.1.2.3 Parameters Section (for Selecting the Functionality)

4.3.1.4 Notes on Settings

This section explains the settings that are required when the installation parameter CSV file is created.

In the installation parameter CSV file, even if valid values have been set for each parameter, depending on the combination of functionality selected or runtime environment, note that the settings may not become enabled, or the silent installation, or environment build or operation after that, may fail.

4.3.1.4.1 All Parameters

When setting a parameter that has nothing to do with the installation functionality, appropriate values must be set so that basic checks, such as the range for strings and numerics that can be entered, for example, are performed. However, this has no impact on the installation.

4.3.1.4.2 JavaSEKind

If Java EE or Java EE 6 is installed, JRE will be ignored even if it is specified, and JDK will be installed.

4.3.1.4.3 JavaEE5HttpListenerPort

The valid range of port numbers when the web server connector (for Interstage HTTP Server) is installed at the same time is 5001-65535 (normally, this is 1-65535). However, if a value of less than 5001 was set in the corresponding condition, the silent installation will succeed, but the Java EE 5 functionality environment build or operation will fail.

4.3.1.4.4 CorbaPort

If the port number that was specified has been registered in a service other than "odserver" in "/etc/services", the execution of the installation will fail. If the corresponding service is not being used, edit "/etc/services" by commenting out the settings of the service, for example.

4.3.2 Execute the Silent Installation

This section explains how to execute the silent installation.

4.3.2.1 Pre-installation Tasks

On the machine that is used to perform the silent installation, ensure that "[4.1 Pre-installation Preparation](#)" has been performed.

Additionally, check the content of the installation parameter CSV file that is to be used, check whether the settings apply in "[4.3.1.4 Notes on Settings](#)", and then store the installation parameter CSV file in any folder.

4.3.2.2 Perform the Installation

Set the server package DVD in the DVD-ROM drive, and then execute the install.sh shell. Note that this operation must be performed as a super user.

```
# su -<RETURN>
# mount -F hsfs -o ro /dev/dsk/<device file name> <DVD-ROM mount directory><RETURN>
# <DVD-ROM mount directory>/install.sh -s <Installation parameter CSV file>
```

Note

- If the shell was executed after specifying the "-c" option instead of the "-s" option, the installation information (the packages to be installed and various settings information) is output without the installation being performed. Firstly, it is recommended that you check the installation information with the "-c" option before performing the actual installation.
- For details on the points that should be noted when mounting the server package DVD, refer to [3.3 How to Mount the Product Media \(DVD-ROM\)](#)

4.3.2.3 Check the Installation Results

Check the content that is displayed when installing this product.

An explanation of each return value is shown below.

Return value	Description	Action
0	The installation completed normally.	
3	Installation of part of a package or setup has failed.	The package was partially installed, therefore it cannot operate normally. Uninstall the package that was installed, remove the cause of the error that was displayed, and then re-execute the installation.
5	There was a problem in the runtime environment or in the method of execution, therefore the installation was aborted.	Possible causes are as shown below Remove the cause of the error and then re-execute the installation. The operating system is unsupported The execution was performed by a user other than a root user
6	There was a problem in this product, which has already been installed, or in the status of a related product, therefore the installation was aborted.	Possible causes are as shown below. Remove the cause of the error and then re-execute the installation. The service is starting Another edition of this product, or a product that cannot be installed with this one, has been installed.
7	There was no functionality to be installed, therefore the installation was aborted.	Check the installed package and installation parameter CSV file settings to find out whether the functionality that was specified has all been installed.
10	The package installation failed, therefore the installation was aborted.	The installation of the package failed, however the system has not been changed. Remove the cause of the error that was displayed, and then re-execute the installation.
20	The command argument is invalid.	Execute using the correct argument.
21	Failed to read the installation parameter CSV file.	Check the path of the installation parameter CSV file that was specified in the argument.
22	The content that was set in the installation parameter CSV file is invalid.	Check the settings of the parameter that was displayed.

Return value	Description	Action
23	Failed to parse the installation parameter CSV file.	The content and/or format, that was defined in the installation parameter CSV file is invalid. Check the installation parameter CSV file.
30 or other numbers	System error	Investigate according to the error message that was displayed. If the cause is unknown, collect the following information, and then contact Fujitsu technical support: Installation parameter CSV file Error message that was displayed Installer log file FJSVcir log file

Note

- The installer log file is normally output to "/var/opt/FJSVVisas/interstage_install.log". However, if an error has occurred in the installer, it may sometimes be output to "/tmp/interstage_install.log", depending on the timing of the error.
- The FJSVcir (CIRuntime Application) log file is output under "/var/opt/FJSVcir/cir/logs".

4.4 Post-installation

This section explains the following aspects of Post-installation:

- [4.4.1 Notes on Handling Servlet Service Error Messages Output when the Web Package is Installed](#)
- [4.4.2 Action to take if an Error Message is Output when the Java EE 5 Function is Installed](#)
- [4.4.3 Action to take if an Error Message is Output when the Java EE 6 Function is Installed](#)
- [4.4.4 Setting up the Port Number of the Web Server](#)
- [4.4.5 Checking the Certificate Fingerprint for Interstage Java EE Admin Console SSL Encrypted Communication](#)
- [4.4.6 Checking the Certificate Fingerprint for Interstage Management Console SSL Encrypted Communication](#)
- [4.4.7 Setting up the Interstage Java EE 6 Operating Environment](#)
- [4.4.8 Setting up Web Applications Quickly Using ijsmartsetup](#)

4.4.1 Notes on Handling Servlet Service Error Messages Output when the Web Package is Installed

This section describes recovering from the following Servlet Service error message that may be generated when the Web Package is installed.

Could not make the Servlet Service environment default settings.

This error indicates that the initialization settings for running an IJServer and the Web server on separate servers could not be made.

If necessary, configure the following settings in each Interstage Management Console on the server machine used for the IJServer and the Web server:

Click [System] > [Settings] > [Update System Settings] > [Servlet Service Settings] > [Run Web server and WorkUnit on the same machine?] > [No].

4.4.2 Action to take if an Error Message is Output when the Java EE 5 Function is Installed

This section explains the action to take if the message below is output and the Java EE 5 function is installed:

**ijinit: ERROR: Message that starts with ISJEE_IJINIT
ijinit failed.**

If any of the above messages is output during installation, then complete installation and execute the *ijinit* command. For details on the *ijinit* command, refer to the Java EE Operator's Guide.

Moreover, set the security authority by executing the *issetsecuritymode* command after executing the *ijinit* command (for details, refer to the Reference Manual (Command Edition)). You must select the same security mode that was selected during installation.

4.4.3 Action to take if an Error Message is Output when the Java EE 6 Function is Installed

If a message with IJ6INIT ID is output during installation, follow the action advised in it to remove the cause of the error, and then perform installation again.

4.4.4 Setting up the Port Number of the Web Server

If the port number of the following web servers is installed using the default value (80), that same port number will be configured for the Apache HTTP Server (Apache HTTP Server bundled with the basic software).

- Interstage HTTP Server (web server based on Apache HTTP Server Version 2.0)
- Interstage HTTP Server 2.2 (web server based on Apache HTTP Server Version 2.2)

If the web servers are being operated alongside each other, you must set different port numbers for each of them.

Depending on the web server usage conditions, refer to the table below and perform the required action:

Web Server Usage Conditions	Action		
	Interstage HTTP Server	Interstage HTTP Server 2.2	Apache HTTP Server
If using Interstage HTTP Server as the normal web server (port number: 80)	No action required	Action 2	Action 3
If using Interstage HTTP Server 2.2 as the normal web server (port number: 80)	Action 1	No action required	Action 3
If using Apache HTTP Server as the normal web server (port number: 80)	Action 1	Action 2	No action required
If using a web server not listed above as the normal web server (port number: 80)	Action 1	Action 2	Action 3

Action 1

Edit the environment definition file (`httpd.conf`) of the Interstage HTTP Server

Action 2

Edit the environment definition file (`httpd.conf`) of the Interstage HTTP Server 2.2

Action 3

Edit the Apache HTTP Server file below - change Listen Directive to a number between 1 and 65535 (excluding 80):

```
/etc/httpd/conf/httpd.conf
```

-

4.4.5 Checking the Certificate Fingerprint for Interstage Java EE Admin Console SSL Encrypted Communication

If "Use SSL encryption" was selected during Interstage installation, an Interstage certificate is generated for Interstage Java EE Admin Console SSL encrypted communication. To check that connection from the web browser to the Interstage Java EE Admin Console is correct, check the generated certificate's fingerprint as described below.

If "Do not use SSL encryption" was selected, the certificate is not generated, and this check is unnecessary.

To check the certificate fingerprint, execute the following:

```
cd [Java EE common directory]/domains/interstage/config  
[JDK directory]/bin/keytool -list -keystore keystore.jks -alias slas -storepass changeit -v
```

The certificate fingerprint is displayed as follows:

```
MD5: 0B:CD:73:56:9F:6B:68:1D:69:3D:FC:3F:75:D7:80:3C  
SHA1: 60:7B:C5:85:E0:F5:70:41:00:94:D2:D8:D7:43:3D:29:DC:D2:6A:08
```

Record the fingerprint that is output.

This Interstage certificate is generated automatically by the product to activate SSL encryption of communication between the Interstage Java EE Admin Console and the web browser immediately following installation. For enhanced security, certificates issued by a CA can be used. For details on how to switch to using CA certificates, refer to "Java EE Application Security Functionality", "SSL" in the "Java EE Function Security" chapter of the Java EE Operator's Guide.

4.4.6 Checking the Certificate Fingerprint for Interstage Management Console SSL Encrypted Communication

If "Use SSL encryption" was selected during Interstage installation, an Interstage certificate is generated for Interstage Management Console SSL encrypted communication. To check that connection from the web browser to the Interstage Management Console is correct, check the generated certificate's fingerprint as described below.

If "Do not use SSL encryption" was selected, the certificate is not generated, and this check is unnecessary.

To check the certificate fingerprint, execute the following:

```
cd [SSL environment settings command storage destination]  
cmdspcert -ed /etc/opt/FJSVisgui/cert -nn SSLCERT | grep FINGERPRINT
```

For details on the command storage destinations and other details, refer to "cmdspcert" in the "SSL Environment Setting Commands" chapter of the Reference Manual (Command Edition).

The certificate fingerprint is displayed as follows:

```
FINGERPRINT(MD5): 40 79 98 2F 37 12 31 7C AE E7 B4 AB 78 C8 A2 28  
FINGERPRINT(SHA1): 07 28 BE 26 94 89 6D F9 ... <(20 bytes of data are displayed in hexadecimal notation.)  
FINGERPRINT(SHA256): F7 16 00 6E A1 6E A2 14 ... <(32 bytes of data are displayed in hexadecimal notation.)
```

Record the fingerprint that is output.

This Interstage certificate is generated automatically by the product to activate SSL encryption of communication between the Interstage Management Console and the web browser immediately following installation. For enhanced security, certificates issued by a CA can be

used. For details on how to switch to using CA certificates, refer to "Customizing SSL Encrypted Communication for the Interstage Management Console" in the "Security" chapter of the Operator's Guide.

4.4.7 Setting up the Interstage Java EE 6 Operating Environment

The Interstage Java EE 6 operating environment must be set up in order to operate the Interstage Java EE 6 DAS Service.

Refer to the "Setting up the Java EE 6 Operating Environment" chapter of the Java EE Operator's Guide (Java EE 6 Edition) before setting up the Interstage Java EE 6 operating environment.

4.4.8 Setting up Web Applications Quickly Using *ijsmartsetup*

The *ijsmartsetup* command is provided so that you can quickly start using web applications that are Java EE 5 compatible, even without knowledge of this product. For details, refer to "ijsmartsetup" in the "Java EE Operation Commands" chapter of the Java EE Operator's Guide.

Chapter 5 Notes on Specific Features

This section contains notes about the following topics:

- [5.1 Notes on Using Web Server \(Interstage HTTP Server\)](#)
- [5.2 Notes on Using JDK/JRE](#)
- [5.3 Notes on Using both of Interstage Java EE Admin Console and Interstage Management Console](#)
- [5.4 Notes on Using the Database Linkage Service](#)
- [5.5 Notes on Using Interstage Data Store](#)

5.1 Notes on Using Web Server (Interstage HTTP Server)

The Web server operating environment is not created immediately after the Admin Server function is installed. If you need to run a Web server on a system in which the Admin Server function is installed, create the Web server operating environment using the *ihscreeate* command. For details about the *ihscreeate* command, refer to the "Interstage HTTP Server Operation Commands" chapter of the Reference Manual (Command Edition).

5.2 Notes on Using JDK/JRE

Characters recommended for the host name

Use the following characters for the host name:

- Uppercase (A to Z)
- Lowercase (a to z)
- Numbers (0 to 9) (*1)
- Hyphens ("-") (*2)
- Periods (".") (*2)

*1 Numbers cannot be used after the last periods of the host name.

*2 Hyphens and periods cannot be used as the first character of the host name. Periods cannot be specified after the host name.

Characters used in the host name must not violate RFC2396.

In the `javax.management.remote.JMXServiceURL` class that was added from JDK/JRE 5.0, the host names that can be specified follow RFC2609. RFC2609 has the constraint that periods (".") cannot be specified after the host name for RFC2396.

If JDK/JRE is used, underscores ("_") cannot be used in the host name.

If non-recommended characters such as underscores are used in the host name, the installation processing period is extended and an error dialog informing you that the Interstage Operation Tool service failed to start is displayed at the time of installation.

Although installation processing continues after the error dialog is displayed, an error dialog informing you that the creation of the IJServer failed.

After the installation is complete, and you log in to the Interstage Management Console, the following message is output, and Interstage operations cannot be executed.

IS: ERROR: is40003: Could not connect to Interstage JMX service

If an error is displayed because non-recommended characters were used in the host name, refer to "Characters recommended for the host name" above, and modify the host name.

Java Monitoring

JDK must be installed to use Java monitoring.

5.3 Notes on Using both of Interstage Java EE Admin Console and Interstage Management Console

Install the packages below in the same directory if you use both Interstage Java EE Admin Console and Interstage Management Console (for example, if you use Integrated GUI Operations method):

- FJSVisgui (Interstage Management Console)
- FJSVisjee (Interstage Java EE)

For details on the Integrated GUI Operations, refer to "How to Use the Interstage Java EE Admin Console" in the "Java EE Application Operation" chapter of the Java EE Operator's Guide.

5.4 Notes on Using the Database Linkage Service

To use the SYS mode Database Linkage Service simultaneously on multiple global zone or non-global zone Oracle Solaris Containers or Oracle Solaris Legacy Containers, the non-global zone hostid must be changed to a value that is different to the hostid of other servers that use the Database Linkage Service (the hostid must be emulated). If the same hostid as another server is used, the transaction ID will be duplicated, therefore the Database Linkage Service may not run correctly.

The procedure used to change (emulate) the non-global zone hostid is shown below.

Note

- To perform this task in Solaris10, Kernel Patch 142909-17 must be installed.
 - This task must be performed in a state where OTS has stopped.
1. Using the *zonecfg* command on the global zone Oracle Solaris, change the target non-global zone hostid to a value that is different to the hostid of other servers that use the Database Linkage Service (Host ID Emulation).

Example

```
# zonecfg -z zone name
zonecfg:zone name> set hostid=unique hostid
```

2. Restart the target non-global zone.

Example

```
# zlogin zone name shutdown -i6 -g0 -y
```

3. Check that the hostid has been changed in the target non-global zone.

Example

```
# zlogin zone name hostid
```

4. To change the hostid after the Database Linkage Service environment build, or if the Database Linkage Service environment was cloned using the Solaris Container cloning feature, use an editor to edit the following Oracle Solaris Containers or Oracle Solaris Legacy Containers file by setting the hostid that was changed (emulated) in "RECOVERYKEY".

File name

```
/opt/FSUNots/etc/repository/_recoveryinfo
```

Example

```
RECOVERYKEY = hostid after being changed
:
```

Note

- Step 4 is not required for new Database Linkage Service environment builds.
- Step 4 will be reflected if a resource management program has been registered. Step 4 is therefore not required if a resource management program has not been registered.
- In cluster systems, overwrite the file on the standby node with the file on the active node.

5.5 Notes on Using Interstage Data Store

5.5.1 About the Registration of the oms Account

When Interstage data store is installed, the oms account will be automatically registered, if it does not already exist.

The oms account must exist, otherwise Interstage data store will not start.

5.5.2 Port Number Used

The initial value of the port number used by Interstage data store services is [9700].

To change the initial value of the port number used by Interstage data store services, use the following command to change it to a number that is not being used by another application or Interstage data store:

```
/opt/FJSVena/server/bin/omschangeport -u "New port number"
```

To change the port number used by Interstage data store services, first stop the Interstage data store services by executing the following command:

```
/opt/FJSVena/server/bin/enablerstop
```

The port number can also be changed while the Interstage data store services are running. To do this, the following conditions must be met:

- The Interstage Directory Service repository must not be running

The port number used by the Interstage data store service is defined in the file below.

The value defined in "OMS_SERVICE=" is the port number used by the Interstage data store service.

```
/opt/FJSVena/server/param/enabler.conf
```

The initial value of the port number used by the repository is a number from 6000 to 65535 that is not being used when the repository is generated. To change the initial value of the port number used by the repository, use the following command and change it to a number that is not being used by another application or Interstage data store:

```
/opt/FJSVena/server/bin/omschanereport "Repository name" -pn " New port number "
```

Use the *omslist* command as shown below to check the port number used by the Interstage data store:

```
/opt/FJSVena/server/bin/omslst -l
```

Output from omlist Command

[Example]

```
-----  
rep001:   server=host01   port=6000   XF  
rep002:   server=host01   port=6001   XF  
-----
```

The "port" value is the port number used by the Interstage data store.

5.5.3 About the loopback Interface

The loopback interface is used by the Interstage data store, and must be started before installation of the FJSVena package, according to the example below:

```
/usr/sbin/ifconfig lo0 up
```

5.5.4 If the Installation Fails

If installation of Interstage data store fails, perform the checks below and take appropriate action:

Check whether the port number is used

If port number (9700) of an initial value of the Interstage data store service is used by other processes, it is not possible to install it.

Check whether /opt/FJSVena/server/bin/omsservd process is running.

If the process is running, it is possible that the system could not be rebooted after uninstalling the Interstage data store.

Check whether process other than /opt/FJSVena/server/bin/omsservd uses port number 9700.

If a process other than /opt/FJSVena/server/bin/omsservd uses port number 9700, then follow the steps below to install Interstage data store:

1. Stop the process that uses port number 9700.
2. Install the Interstage data store service (FJSVena package).
3. Change the port number used by the Interstage data store service to a port other than 9700.
4. Start the process stopped in the first step.

Check whether the oms account is registered

Use the `/usr/bin/id oms` command to check whether the oms account is registered.

If the oms account is not registered, perform the checks below and take appropriate action:

If the account cannot be registered because there is a difference between /etc/passwd and /etc/shadow files.

Execute the `/usr/sbin/pwconv` command.

If the oms and root accounts have the same group ID.

Ensure that the group ID of the root account is registered in the `/etc/group` file.

If the installation was interrupted

In this case, uninstall the FJSVena package by using the `pkgrm` command, and then it by custom installation.

Chapter 6 Uninstallation Procedure

6.1 Pre-uninstallation

Essential Tasks before Beginning Uninstallation

- Close any applications that are running.

Note

When uninstalling Interstage under Solaris 10/11 in a global zone, running non-global zone could lead to a failed uninstallation. Stop any non-global zone prior to uninstalling Interstage.

- Check if any repositories of Interstage Directory Service are running by using the [System] > [Services] > [Repository], [Repository: View Status] page in the Interstage Management Console. Stop any running repositories.

Back up the repositories if necessary, and then delete all repositories. For details on backing up repositories, refer to the "Maintenance (Resource Backup)" chapter of the Operator's Guide.

Additionally, save any required files from the following directories:

- /opt/FJSVirep
 - /etc/opt/FJSVirep
 - /var/opt/FJSVirep
 - /opt/FJSVirepc
 - /var/opt/FJSVirepc
- If Interstage and Systemwalker Centric Manager Operation Management Server have been installed on the same server, stop all Systemwalker Centric Manager functions. For details of the stop method, refer to the Systemwalker Centric Manager manual.

Note

- For details on how to stop the various services provided by the Java EE function, refer to the Java EE Operator's Guide.
- For details on how to stop the various services provided by the Java EE 6 function, refer to the Java EE Operator's Guide (Java EE 6 Edition).

Pre-uninstallation Preparations

- If FJSVots has been installed, delete the Database Linkage Service operating environment.

```
isstop
IS_CMD_LOCK=off;export IS_CMD_LOCK (*1)
otssetup -d (*2)
```

*1 Only required if initialized with the Interstage Setup Command. This environment variable should be set only during this operation.

*2 When this command is executed, the CORBA service and naming service must already be running.

- Before beginning uninstallation of the Interstage Application Server "Server Package", stop all services and applications of Interstage Application Server by executing the following commands:

```
# isstop -f
# /opt/FJSVihs/bin/ihsstop -all
# tdunsetup
# ismngconsolestop
```

- When installing FJSVisjee, stop all services for Java EE 5 functions.

1. Stop Interstage Java EE Node Agent services.

```
/opt/FJSVisjee/bin/ijnastop
```

2. Stop Interstage Java EE DAS services.

```
/opt/FJSVisjee/bin/ijdasstop
```

3. If a message broker is running, then stop it.

```
/opt/FJSVisjee/imq/bin/imqcmd shutdown bkr -b <host>:<port>
```

4. If Java DB is running in a client/server environment, then stop it.

```
/opt/FJSVisjee/bin/asadmin stop-database --dbhost <host> --dbport <port>
```

If you are running the Java DB in an embedded environment, you must also stop the Java VM used by the Java DB.

Note

- For details on how to stop Java EE 5 services, refer to the Java EE Operator's Guide.
 - Uninstallation will proceed even if Java DB is running, in which case files in /opt/FJSVisjee/javadb might not be deleted. If this happens, restart the system, execute "[6.3 Tasks to Perform After Uninstallation](#)", and delete the remaining files. Additionally, delete files in the Java DB system directory if necessary.
- When installing FJSVisje6, stop all services for Java EE 6 features.

1. Stop Interstage Java EE 6 DAS services.

```
/opt/FJSVisje6/glassfish/bin/asadmin stop-domain
```

2. If a message broker is running, then stop it.

```
/opt/FJSVisje6/mq/bin/imqcmd shutdown bkr -b <host>:<port>
```

3. If Java DB is running in a client/server environment, then stop it.

```
/opt/FJSVisje6/glassfish/bin/asadmin stop-database --dbhost <host> --dbport <port>
```

If you are running the Java DB in an embedded environment, you must also stop the Java VM used by the Java DB.

4. Run the RC script to stop the PCMI services.

```
/var/opt/FJSVisje6/pcmi/isje6/FJSVpcmi stop
```

Note

- When using a Java EE 6 command, specify its full path. For details, refer to "Java EE 6 Operation Commands" in the Java EE Operation Guide (Java EE 6 Edition).
- Uninstallation will proceed even if Java DB is running, in which case files in /opt/FJSVisje6/javadb might not be deleted. If this happens, restart the system, perform "[6.3 Tasks to Perform After Uninstallation](#)", and delete the remaining files. Additionally, delete files in the Java DB system directory if necessary.
- Environment definition files and log files are deleted during uninstallation - back them up before uninstallation if necessary.

6.2 Uninstallation

The following methods are available for uninstalling the Interstage Application Server "Server Package". Select the appropriate uninstallation method for your system.

- [6.2.1 Uninstalling from \[Uninstall \(middleware\)\]](#)
- [6.2.2 Uninstallation Using uninstall.sh](#)

Note

- As shown below, to continue using functionality that is used in other products, the `uninstall.sh` shell should be used to uninstall the Server Package so that functionality that is still required is not also removed.
 - CORBA Service can also be used in the following product. If this product is installed, do not uninstall CORBA Service.
 - Systemwalker Centric Manager operation Admin Server
 - The Interstage Directory Service Software Development Kit may be in use by other products. If this is the case, do not uninstall it.

6.2.1 Uninstalling from [Uninstall (middleware)]

This section explains the procedure to uninstall Interstage from "Uninstall (middleware)".

Note that, if Interstage is uninstalled from "Uninstall (middleware)", all the packages that were installed using Interstage will be removed.

1. Become a superuser on the system.

```
# su <RETURN>
```

2. Execute the following command:

```
# /opt/FJSCVcir/cimanager.sh -c
```

3. "Uninstall (middleware)" starts, and the names of products that are already installed are displayed.

Type the number for the corresponding product.

```
Loading Uninstaller...

Currently installed products
1. Interstage Application Server Enterprise Edition V11.1.0

Type [number] to select the software you want to uninstall.
[number,q]
=>1
```

4. Details about the product that was selected are displayed. To continue, type **y**.

To return to the previous information, type **b**. To cancel, type **q**.

```
Interstage Application Server Enterprise Edition
  Description: Interstage Application Server Enterprise Edition
  Version: V11.1.0
  Manufacturer: Fujitsu Limited.
  Install directory: /opt/FJSCVisas
  Date of install: 2013-8-9

Starting the uninstall of the software. Are you sure you want to continue?
[y,b,q]
=>y
```

5. If the uninstallation was successful, the following content will be displayed:

```
Uninstalling...

Interstage Application Server Enterprise Edition is being uninstalled now.
 100% #####

The following products have been uninstalled successfully:
  Interstage Application Server Enterprise Edition

Exiting Uninstaller.
```

6. Reboot the system.

```
# cd / <RETURN>
# /usr/sbin/shutdown -y -i6 -g0 <RETURN>
```

6.2.2 Uninstallation Using uninstall.sh

To change the functionality that is used, or to uninstall Interstage so that packages used in other products are not removed, the use of `uninstall.sh` makes it possible to uninstall only the package that was selected.

Uninstallation of the Interstage Application Server "Server Package" must be performed by a super-user. To uninstall, use single user mode or multi-user mode.

If uninstalling in multi-user mode, check that other users' operations do not affect the uninstallation. Uninstallation of the Server Package is performed using the following procedures.

1. Log into the system as a super-user.

```
# su <RETURN>
```

2. Execute `uninstall.sh`

```
# /opt/FJSVisas/uninstall/uninstall.sh <RETURN>
```

Perform the uninstallation answering the `uninstall.sh` prompts.

Note

FJSVisas and FJSVisco are packages required for maintenance and problem investigation, so do not remove them if you decide to leave any packages (they should only be removed after all packages have been deleted). In particular, if FJSVisas was removed, the product information that is registered in `uninstall.sh` and "Uninstall (middleware)" will be deleted.

This step should only be performed when you want to ensure that packages used in other products are not removed.

3. System Reboot

```
# cd / <RETURN>
# /usr/sbin/shutdown -y -i6 -g0 <RETURN>
```

6.3 Tasks to Perform After Uninstallation

6.3.1 Directory Deletion

There may be cases where files or folders that should have been deleted still remain. If this happens, delete the following directories (back them up beforehand, if necessary):

- If FJSVtdis has been uninstalled:

Back up the required files from the following directories, and then delete these directories:

- /opt/FSUNtd
- /etc/opt/FSUNtd
- /var/opt/FSUNtd

If the Systemwalker Centric Manager Operation Management Server has been installed, do not delete /opt/FSUNtd/var/IRDB.

- If FJSVmqd has been uninstalled:

To reinstall this product and reuse the MQD system, delete the following directories:

- Directories under /opt/FJSVmqd (except for /opt/FJSVmqd/mqd)

If you do not want to reuse the MQD system, delete the following directory:

- /opt/FJSVmqd

- If FJSVes has been uninstalled:

Back up the required files from the following directories, and then delete these directories:

- /opt/FJSVes
- /etc/opt/FJSVes
- /var/opt/FJSVes

- If FJSVihs has been uninstalled:

Back up the required files from the following directories, and then delete these directories:

- /opt/FJSVihs
- /etc/opt/FJSVihs
- /var/opt/FJSVihs

- If FJSVisas has been uninstalled:

Back up the required files from the following directories, and then delete these directories:

- /opt/FJSVisas
- /etc/opt/FJSVisas
- /var/opt/FJSVisas
- /etc/rc2.d/S99startis

- If FJSVisgui has been uninstalled:

Back up the required files from the following directories, and then delete these directories:

- /opt/FJSVisgui
- /etc/opt/FJSVisgui
- /var/opt/FJSVisgui

- If FJSVj2eer has been uninstalled:

Back up the required files from the following directory, and then delete this directory:

- J2EE common directory (if this is configured as a directory other than /var/opt/FJSVj2ee/deployment)

- If FJSVj2ee has been uninstalled:

Back up the required files from the following directories, and then delete these directories:

- /opt/FJSVj2ee
- /etc/opt/FJSVj2ee
- /var/opt/FJSVj2ee

- If FJSVjms has been uninstalled:

Back up the required files from the following directories, and then delete these directories:

- /opt/FJSVjms
- /etc/opt/FJSVjms
- /var/opt/FJSVjms

- If FJSVejb has been uninstalled

Back up the required files from the following directories, and then delete these directories:

- /opt/FJSVejb
- /etc/opt/FJSVejb
- /var/opt/FJSVejb

- If FJSVisjee has been uninstalled:

Back up the required files from the following directories, and then delete these directories:

- /opt/FJSVisjee
- /etc/opt/FJSVisjee
- /var/opt/FJSVisjee

- If FJSVporb has been uninstalled:

Back up the required files from the following directories, and then delete these directories:

- /opt/FJSVporb
- /etc/opt/FJSVporb
- /var/opt/FJSVporb

- If FSUNextp has been uninstalled

Delete all the following directories:

- /opt/FSUNextp
- /etc/opt/FSUNextp
- /var/opt/FSUNextp

- If FSUNod has been uninstalled:

Back up the required files from the following directories, and then delete these directories:

- /opt/FSUNod
- /etc/opt/FSUNod
- /var/opt/FSUNod

- If FSUNots has been uninstalled:

Delete the following directories:

- /opt/FSUNots
- /etc/opt/FSUNots
- /var/opt/FSUNots

- If FJSVirep has been uninstalled
Delete the following directories:
 - /opt/FJSVirep
 - /etc/opt/FJSVirep
 - /var/opt/FJSVirep
- If FJSVirepc has been uninstalled:
Delete the following directories:
 - /opt/FJSVirepc
 - /var/opt/FJSVirepc
- If FJSVjs5 has been uninstalled:
Delete the following directories:
 - /opt/FJSVjs5
 - /etc/opt/FJSVjs5
 - /var/opt/FJSVjs5
- If FJSVisjmx has been uninstalled:
Delete the following directories:
 - /opt/FJSVisjmx
 - /etc/opt/FJSVisjmx
 - /var/opt/FJSVisjmx
- If FJSVssosv has been uninstalled:
Back up the required files from the following directories, and then delete these directories:
 - /opt/FJSVssosv
 - /etc/opt/FJSVssosv
 - /var/opt/FJSVssosv
- If FJSVssoc has been uninstalled:
Back up the required files from the following directories, and then delete these directories:
 - /opt/FJSVssoc
 - /etc/opt/FJSVssoc
 - /var/opt/FJSVssoc
- If FJSVssofs has been uninstalled:
Back up the required files from the following directories, and then delete these directories:
 - /opt/FJSVssofs
 - /etc/opt/FJSVssofs
 - /var/opt/FJSVssofs
- If FJSVssoz has been uninstalled:
Back up the required files from the following directories, and then delete these directories:
 - /opt/FJSVssoz
 - /etc/opt/FJSVssoz
 - /var/opt/FJSVssoz

- If FJSVssocm has been uninstalled:

Back up the required files from the following directories, and then delete these directories:

- /opt/FJSVssocm
- /var/opt/FJSVssocm

- If FJSVena has been uninstalled:

Back up the required files from the following directories, and then delete these directories:

- /opt/FJSVena
- /var/opt/FJSVena

- If FJSVisje6 has been uninstalled:

Back up the required files from the following directories, and then delete these directories:

- /opt/FJSVisje6
- /etc/opt/FJSVisje6
- /var/opt/FJSVisje6

Additionally, if the following files exist, delete them using the rm command:

- /etc/rc0.d/K00FJSVpcmiisje6
- /etc/rc2.d/S99FJSVpcmiisje6

- If FJSVpcmi has been uninstalled:

Back up the required files from the following directories, and then delete these directories:

- /opt/FJSVpcmi
- /etc/opt/FJSVpcmi
- /var/opt/FJSVpcmi

- If FJSVisscs has been uninstalled:

Back up the required files from the following directories, and then delete these directories:

- /opt/FJSVisscs
- /etc/opt/FJSVisscs
- /var/opt/FJSVisscs

- If FJSVjdk6 and FJSVjdk7 have been uninstalled:

Back up the required files from the following directory, and then delete this directory:

- /opt/FJSVawjbc

6.4 Notes

This section contains notes on the following topics:

- [6.4.1 Notes about Uninstalling CORBA Service](#)
- [6.4.2 Notes about Uninstalling Interstage Data Store](#)

6.4.1 Notes about Uninstalling CORBA Service

The CORBA Service included in Interstage is also used by the following product. If CORBA Service is used by another product, do not uninstall it.

- Systemwalker Centric Manager operation Admin Server

6.4.2 Notes about Uninstalling Interstage Data Store

If the oms account has not been registered in the system, then Interstage data store will register a new one when it is installed. After Interstage data store is uninstalled, delete the oms account if it is no longer required.

Appendix A Installing/Uninstalling Interstage Directory Service Software Development Kit

This appendix describes the procedure for installing and uninstalling Interstage Directory Service Software Development Kit ("Interstage Directory Service SDK").

If Directory linkage is used in the functions used in the Web Package, Interstage Directory Service SDK must be installed according to the procedure described in this appendix.

Execute the procedure described in this appendix with superuser authority.

- [A.1 Installing Interstage Directory Service SDK](#)
- [A.2 Uninstalling Interstage Directory Service SDK](#)

A.1 Installing Interstage Directory Service SDK

Check that the installation is not affected by other user operations, and then perform the installation in multi user mode.

1. Install Interstage Directory Service SDK (FJSVirepc) from pkgadd(1M).

Specify FJSVirepc.pkgtrans that is stored on the server package DVD-ROM and then execute *pkgadd*.

```
# pkgadd -d /cdrom/cdrom0/PKGS/FJSVirepc.pkgtrans FJSVirepc
```

2. The following menu is output when the FJSVirepc package installation is specified.

```
Processing package instance <FJSVirepc> from </cdrom/cdrom0/PKGS/FJSVirepc.pkgtrans>

Interstage Directory Service Software Development Kit
(sparc) X.X(*1)

Copyright YYYY(*2) FUJITSU LIMITED

THIS PACKAGE CONTAINS UNPUBLISHED PROPRIETARY SOURCE CODE OF FUJITSU.

The copyright notice above does not evidence any
actual or intended publication of such source code.

This package default installation information is following:
  Program install directory: /opt
  Fixed configuration install directory: /etc/opt
  Modifying configuration install directory: /var/opt

Do you want to change the installation directory? [y,n,?,q] y or n <RETURN>

The above directory is changed: y<RETURN>
```

*1 This is the FJSVirepc package version.

*2 This is the FJSVirepc package copyright year.

3. This shows that the package storage directory is [/opt], environmental definition file storage directory is [/etc/opt] and that the log file storage directory and work directory is [/var/opt]. Enter one of the following:
 - The above directory is not changed: n<RETURN> or <RETURN>
 - The installation is aborted: q<RETURN>

4. If the installation directory is changed, enter the desired installation directory path according to the message.

```
Program install directory information.
  Default install directory is /opt.

Please specify install directory: [?,q] directory A <RETURN>
Fixed configuration install directory information.
  Default install directory is /etc/opt.

Please specify install directory: [?,q] directory B <RETURN>
Modifying configuration install directory information.
  Default install directory is /var/opt.

Please specify install directory: [?,q] directory C <RETURN>
This package installation information is following:
  Program installation directory:
  Default directory      : /opt
  Specified directory   : directory A
  Fixed configuration installation directory:
  Default directory     : /etc/opt
  Specified directory   : directory B
  Modifying configuration installation directory:
  Default directory     : /var/opt
  Specified directory   : directory C

Do you want to change the installation directory? y or n <RETURN>
```

5. Check that the directory that was changed is correct, and enter one of the following:

- The directory is changed again: y<RETURN>
- The directory is correct: n<RETURN> or, <RETURN>
- The installation is aborted: q<RETURN>

This package contains scripts which will be executed with superuser authority. For this reason, confirm that you want to continue with the installation.

```
Using </opt> as the package base directory.
## Processing package information.
## Processing system information.
## Verifying disk space requirements.
## Checking for conflicts with packages already installed.
## Checking for setuid/setgid programs.

This package contains scripts which will be executed with super-user
permission during the process of installing this package.

Do you want to continue with the installation of <FJSVirepc> [y,n,?] y or n <RETURN>
```

6. Enter one of the following:

- The installation is continued: y<RETURN>
- The installation is aborted: n<RETURN>

7. If y<RETURN> is entered in step 6, the installation starts.

A.2 Uninstalling Interstage Directory Service SDK

Check that the uninstallation is not affected by other user operations, and then perform the uninstallation in multi user mode.

1. Uninstall Interstage Directory Service SDK (FJSVirepc) from pkgrm(1M).

Specify FJSVirepc and then execute pkgrm.

```
# pkgrm FJSVirepc<RETURN>
```

2. A message asking to confirm that you want to remove this package is output.

Check that FJSVirepc is output. To continue the uninstallation, enter y<RETURN>. To abort the uninstallation, enter n <RETURN>.

```
The following package is currently installed:
  FJSVirepc  Interstage Directory Service Software Development Kit
             (sparc) X.X(*)

Do you want to remove this package? [y,n,?,q] y or n <RETURN>
```

* This is the FJSVirepc package version.

3. This package contains scripts which will be executed with superuser authority. For this reason, confirm that you want to continue with the uninstallation.

To continue the uninstallation, enter y<RETURN>. To abort the uninstallation, enter n <RETURN>.

```
## Removing installed package instance <FJSVirepc>

This package contains scripts which will be executed with super-user
permission during the process of removing this package.

Do you want to continue with the removal of this package [y,n,?,q] y or n <RETURN>
```

4. If y<RETURN> is entered in step 3, the uninstallation starts.

Appendix B Secure Operation from the Interstage Java EE Admin Console/Interstage Management Console

The Interstage Java EE Admin Console/Interstage Management Console integrates the operation view for Interstage Application Server services to allow centralized control.

The information in this chapter is for secure operation from the Interstage Java EE Admin Console/Interstage Management Console of Standalone Server standard installations.

For details on the Interstage Java EE Admin Console, refer to the Java EE Operator's Guide.

For details on the Interstage Management Console, refer to "Login Authentication for the Interstage Management Console" in the "Configuring the Interstage Management Console" chapter of the Operator's Guide.

The following configuration items must be set to ensure secure operation from the Interstage Java EE Admin Console/Interstage Management Console on a Standalone Server standard installation:

- Place a "No Entry" system applications section on the machine used for installing Interstage to keep out non-trusted users.
- Disable all remote login services to the OS.
- During installation, when the "Interstage Java EE Admin Console"/"Interstage Management Console Settings" dialog is displayed, select [Use SSL encryption].
- Limit users of the Interstage Management Console to those who have responsibility imposed by a role, and those who will not act dishonestly. For details on roles, refer to the Operator's Guide.
- Limit users of the Interstage Java EE Admin Console to those who have responsibility, and those who will not act dishonestly. For details, refer to the Java EE Operator's Guide.
