Point

User roles

When using this product it is assumed that the user roles can be classified as follows:

Infrastructure administrator

- Sets up and maintains Systemwalker Software Configuration Manager.
- Defines the managed servers for Systemwalker Software Configuration Manager.
- Defines policies for managing Windows patches, releases the patches obtained from Microsoft Windows Server Update Services (WSUS), and determines the classification levels.
- Obtains Linux OS patches and registers them with yum (Yellowdog Updater Modified) repository servers.
- Obtains patches for Fujitsu middleware and registers them with Systemwalker Software Configuration Manager.
- Defines the parameters to be collected from the software and the parameters to be configured in it.
- It is possible to use the management console to reference the patch application status, software parameter setting values, and configuration information of hardware and software for all the servers in the data center.

Dual-role administrator

- Acts as both an infrastructure administrator and a tenant administrator.

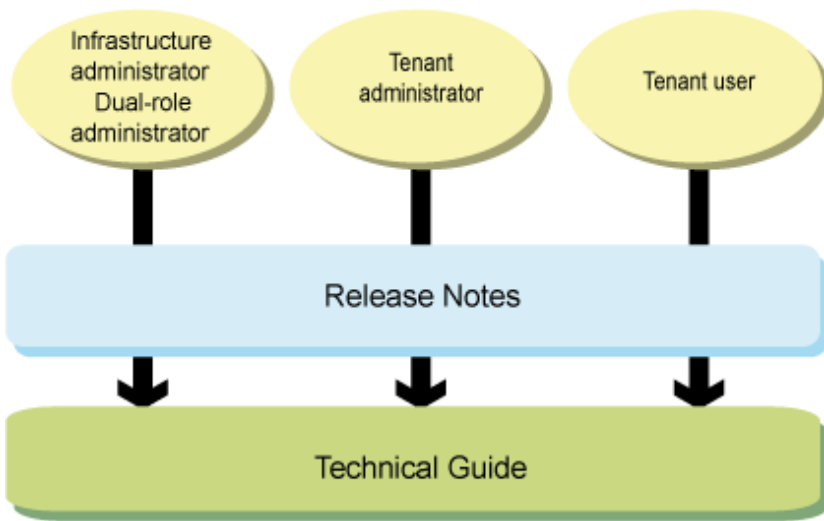

Tenant administrator

- Uses the management console to apply patches to the servers within their tenancy.
- Uses the management console to configure parameters in software on servers belonging to their tenancy.
- Uses the management console to reference the patch application status, software parameter setting values, and software configuration information for the servers within their tenancy.

Tenant user

- Uses the management console to apply patches to the servers they manage themselves.
- Uses the management console to configure parameters in software on servers they manage themselves.
- Uses the management console to reference the patch application status, software parameter setting values, and software configuration information for servers they manage themselves.
